NEGLECTED OPPORTUNITIES

(By Prof. T. Brailford Robertson)

For periods varying from 50 to 75 years of the States of the Commonwealth have possessed... neglected opportunities... field for training...

In comparatively recent years we have added to this a wealth of biological... two special curricula... The University of Adelaide is offering...

Producing Country

Australia has been, and for many decades yet must continue to be, a producing country... insect pests...

These products are of biological origin. Their most advantages and... production necessities... knowledge and application of some of the most abstruse principles...

Scientific Research

Some 18 months ago the Federal Government, acting upon the recommendation of Sir Frank Heath... scientific research... primary productions and the better utilization of their by-products...

Since our products are mainly of biological origin the investigation we need were men with training in biological sciences... knowledge of the chemical nature of foods... biological products undergo...

Field for Training

This situation does not arise from any fault of the universities themselves. Opportunity to acquire this training has been long available to Australians... field for training... insect pests...

Two Special Curricula

The University of Adelaide is offering two special curricula leading to the Degree of Bachelor of Science... These are specially designed to convey that type of knowledge most urgently required for the future development of our biological primary industries...

All of these professions are very necessary, interesting, and valuable. Yet, much as they are needed, they will be absurd if on the one hand the profession of medicine becomes overcrowded while, on the other hand, the Council for Scientific and Industrial Research has to import bacteriologists... insect pests...
