

APPING UNKNOWN LAKES

Mr. Madigan Will See If Lakes Are Lakes

PHOTOS. FROM AIR

NEXT week Mr. C. T. Madigan, lecturer in geology at Adelaide University, will begin a journey that will take him over country that no man has yet crossed. This is the unknown patch of country 280 miles long and on an average 5 miles wide, north of Lake Eyre. Two Wapiti planes have been lent by the Federal Government to assist in the survey work.

The party will consist of Mr. Madigan, two pilots and a fourth man, who has

to be selected. He will be a man accustomed to taking photographs with a camera from a plane. Three machines will go by rail, first to Marree, then Alice Springs and back to Oodnadatta.

Mr. Madigan will leave for Melbourne Sunday, and the flight will begin on Monday, stopping places being Mildura, Swan Hill, Marree and Birdsville on the Queensland border.

DIRECTION OF FLIGHTS

From Birdsville the first flight over the unknown country will be done. The plane will fly diagonally across it to Alice Springs.

The second flight will be north-east from Alice Springs, south over the area to be surveyed and back to the Springs. The third will be south-west from the centre of the area and in a circular direction to Birdsville.

TWO CAMERAS CARRIED

The place in which Mr. Madigan will work will be one of the Air Force aircraft he will operate. The man will be in the second machine to obtain photographs when the last lot enough.

Madigan said yesterday that he on this expedition, to clear up a number of geological problems of great interest to Australia. This patch of land had never been traversed by a man. Capt. Sturt had travelled its eastern border in 1845; Barclay, explorer, had touched its northern end in 1888; and David Lindsay its western end. The present Surveyor-General (Mr. Day) had travelled along its border in 1916. But the interior is a mystery.

"Mr. Day agrees with me," said Mr. Madigan, "that Leichhardt may have died here. No trace of him has ever been found, and even his buggy wheels, which were almost indestructible, have been discovered."

Leichhardt was last heard of on July 26, 1848. With five white men and a black he was on an expedition to the Gulf of Carpentaria. What happened to the party is one of the mysteries of an exploration, for no trace of it was found by the search parties sent periodically for the next 24 years. Travelling this blank land is not the secret of the expedition," continued Madigan. "I hope to make a few short trips from Marree to link up what is known of that part of the country. People have been through it, but no geometrical survey work has ever been done there."

Presently it is quite possible that the physical features marked on maps now may be miles out." Madigan will fly over the MacDonnell Ranges to study the continuity of

LAKES TO BE EXPLORED

On the return journey flights will be made over Lakes Eyre, Frome, and Calla-

"The lakes are marked on maps," said Madigan, "but there is no certainty about certain water." Many plants will be part of the survey, and if possible, tests will be made for the lakes may contain minerals now imported."

"The lakes are marked on maps," said Madigan, "but there is no certainty about certain water."
