Multimodal Authoring and Authority in Educational Comics: Introducing Derrida and Foucault for Beginners

Aaron Scott Humphrey, University of Adelaide

Abstract

Academic writing has generally been understood as operating primarily within the linguistic modality, with writing remediating the "voice" of an educator or lecturer. Comics, by contrast, are more explicitly multimodal and derive much of their meaning from visual, spatial and linguistic modalities. Because of their multimodality, educational comics challenge the conception of an authoritative author’s "voice," as is typically found in traditional educational and academic writing.

To examine how authorship and authority function in multimodal educational texts, this paper examines several books in the popular "For Beginners" and "Introducing" series of "graphic guides," which use images, text, and comics to summarise the work of major philosophers – in this case Derrida and Foucault. The books chosen for this study are all collaborative efforts between writers, illustrators, and designers. In each book, the collaborations function differently, engendering different divisions of authorial labor and forging different constructions of multimodal relationships between image, text, and design.

In order to more fully interrogate the ways that these educational comics combine multimodal modes of meaning, this paper itself takes the form of a comic, mimicking at times the books that it is examining. In this way, it serves as a self-reflexive critique of the idea that authorial voice is central to academic writing, and as an example of the challenges and opportunities presented by composing multimodal scholarship which eschews this conception of linguistic authorship.

MULTIMODAL

AUTHORSHIP
and
AUTHORITY
in Educational Comics:

Introducing Foucault & Derrida
For Beginners

Aaron Humphrey
Michele Foucault and Jacques Derrida are legendary figures in the humanities and are among the field's most-cited authors.

Along with fellow Frenchmen Pierre Bourdieu! (who will not be discussed in this paper...)

With cultural capital like this, was there any doubt that they would eventually become the subjects of comic books?

Namely, these comic books:

These comics discuss the theoretical work of Foucault and Derrida visually and spatially, as well as by using conventional 'alphabetic' text. The arguments they make are MULTIMODAL...
The concept of multimodal literacies was developed by the New London Group, who suggested that six design elements contribute to the process of creating meaning.

Comics in particular make very apparent the ways these modalities co-exist and interact with each other. For this reason, this paper will also take the form of a comic.

We are accustomed to disregarding the visual and spatial modalities of writing, along with the verbal and gestural modalities of oral presentations, in preference of the “true” linguistic modality...

...and in the process have elevated the myth of authorial voice, agency and authority — while subjugating or ignoring the roles of other actors in the production of texts and meanings.

"Formal analysis is in its own modest way an analysis of power."

Franco Moretti

Examining a text’s multimodal forms can uncover the powers of other actors to affect how meaning is conveyed — the writer’s voice is often not the loudest.

This paper will investigate these comics, focusing on how they work as multimodal texts.
These four books are all roughly the same size...

...and roughly the same length.

Found commonly in university book stores, each has been reprinted several times since the mid-1990s.

Although coinciding with the literary ascendance of graphic novels, and prefiguring more recent comics that have entered into academic discourse, the books in the Introducing and For Beginners series follow a template established by a small press sensation from the 1970s:

THE GRANDDAD OF THEM ALL!
Marx for Beginners (1976) was the second book by the Mexican cartoonist Rius to be published in English, following Cuba for Beginners (1971).

An incredibly prolific and popular cartoonist in Mexico, Rius is now in his eighties and has published more than 50 books, the most recent in 2014.

Very few are available in English.

Rius’ use of cartoons and hand-written text makes his work stand out compared to other paperback books about Marx from the 1970s.

Today, his approach remains iconoclastic...

"I don’t like using the computer to design the page layout because it homogenises everything. It’s a globalising format."

– interview, 2002

I’ve found that composing this article with just pen and paper has required a different kind of thinking than writing with a word processor and citation software.
Throughout Marx for Beginners, Rius uses his own handwriting instead of typesetting…

... that is, except for when quoting passages directly from Marx or other sources. As a result, the experience of reading these quotes is distinct from that of reading Rius’ own words. This is fundamentally different from most academic and educational texts, where quoted material is visually identical to the surrounding text, almost as if these sources had been completely absorbed into the voice of the author.

Other voices come from his little cartoons, which do not represent distinct or recurring characters, but still manage to argue with each other.

There appear to be two distinct levels of authority—that which comes from the typeset text of Rius' sources, and that which comes from his own pen.*

The books about Foucault and Derrida, which are the work of multiple people, complicate this issue even further:

Where can we find authority in a book with multiple authors working in different modalities?

*The fact that the hand-written English translation comes written by a different hand than Rius’ emphasises that all “authorial authority” is a construct.
The book was first published in English by the Writers & Readers publishing collective.

"It was an instant hit! Rius' brilliant primer was to sell over a million copies in twelve languages."

Co-publisher & Translator
Richard Appignanesi

The cooperative turned the 'For Beginners' format into a franchise of more than 100 titles, but the collective eventually fractured, resulting in two lines of books, often covering the same topics.

For Beginners
Writers and Readers, Inc
Founding Editor: Glenn Thompson

Introducing...
Totem Books/Icon Books
Founding Editor: Appignanesi

While most of these books follow the formal template established by Rius, they are different from his work in that the duties Rius performed as cartoonist have been separated into multiple roles for multiple people.

How have these books been used? An anecdotal account:

I had already read Introducing Foucault a while back, when I was first reading Archaeology of Knowledge...

Krista A. Kennedy, circa 2003

Even though I've read more Foucault since then, I went ahead and picked up Foucault for Beginners, since that seemed to be what everyone else in the class was reading in preparation.

Designer

Writer

Artist

Ecology

Post-Modernism
Our understanding of the division of labour in books is often related to the divisions between modalities...

Writer/linguistic  Artist/visual  Designer/spatial

However, in the books themselves, these modalities are merged together, creating meanings which are multimodal and often cannot be separated cleanly as the work of 'just' the writer, 'just' the artist or 'just' the designer.

Meaning arises from the relationships between these modalities!

Each of these books constructs the relationships between modalities differently, as well as constructing different models of collaboration between writer, artist & designer.

This paper will examine these books in order of a decreasing number of authorial collaborators, and an increasing complexity in the multimodal collaborations between modalities.

<table>
<thead>

<td>Fused</td>
</tr>
</tbody>
</table>

This investigation will be focused on the different types of relationships that are constructed, and on the ways these multimodal relationships themselves relate to the books' overall meanings.

LET'S BEGIN!
Inside my pages; a huge array of **visual styles** and **typography**!

(which often seem to be somewhat arbitrary)

The images, text and design sometimes work in concert —

such as when this collage about the primal connections between power, emotion and violence...

... is followed by this sedate family scene illustrating the ways power is subtly deployed through language

Turning the page, the inverted text mode reverts to normal black-on-white...

this helps convey the idea of two co-existent realms— the traumatic mechanisms of power underlying everyday existence, and that experience of the everyday which normalises and obscures those mechanisms.

However, at other points, the images and the text seem to be at cross purposes. On this page, Fillingham quotes a section from Foucault's "This is not a Pipe", while Moshe & George seem to illustrate a different, contradictory passage.

"I am no more than the words you are now reading"

The text asserts the plain-faced authority of writing...

... while the cartoons argue that images impose their reality on the viewer.

"The case has but to lift, the frame to loosen, the painting to tumble down, the words to be scattered. The "pipe" can "break"
Other battles for control over the meaning of the book can be found in the representations of Fillingham, who seems to have asked her collaborators to draw her into certain passages, as if to assert her authority over the book's visual domain as well as its text. She appears on the first page, emerging from Foucault's head like Athena from Zeus! but her authority over her own words is undermined by Long and Dunkelberger's design. Reading just the largest words, an unintended message emerges:

First of all, who is this guy, Michel Foucault? Let's answer the second question first. First name is pronounced like the English girls name, Michele. Foucault is like as in fowl, plus as in second, coming down harder on the second. Who was he? A French guy, a peculiar French type, THE FAMOUS INTELLECTUAL.

Jean-Paul Sartre, who really defined the type: a thinker, with thoughts on a whole variety of subjects, particularly recognized as an important national resource, expected to say important, unimportant things, to get involved in politics from time to time, and to symbolize knowledge and thought for the nation and the world.

In a later passage, she appears on one page while her words are printed across the page divide, seeming to float from their own word balloon.

And how are we meant to take the fact that Mosh & George draw the writer so inconsistently?

The pages themselves are the site of a power struggle where meanings are contested. The authorship of the pages themselves is unclear.

Fillingham's voice is at times drowned out by the noise of her fellow collaborators.
DERRIDA for BEGINNERS

Words: Jim Powell
 Pictures: Van Howell
 Design: Terrie Dunkelberger

Q: How does the design of this book work?
A: It's less obtrusive than in Foucault for Beginners, and facilitates the feel of a double act between Powell and Howell.

Q: A double act? How do you mean?
A: The writing and art run in parallel, not always directly referring to each other, but providing different perspectives on the same subjects.

Meanwhile, Howell's drawings are wordy and full of double meanings!

Howell's cartoons frequently combine both visual and verbal puns to create what Derrida might call an 'undecidable' argument.

Here, Howell compares Derrida's concept of the metaphysics of 'presence' to yearning for presents at Christmas, and parallels this pun with another: John's gospel identifies Jesus as 'Logos' - 'The Word' of God, so Howell turns Derrida's 'logocentrism' to 'logos-enterism', or the coming of Christ.

In Of Grammatology, Derrida explored 'logocentrism,' the bias for the spoken word over the written word. Howell plays with this by drawing a sound-based pun: a 'Gramma' (Grandma) protesting oral traditions ('Old Wives Tales') with a written sign, but she's also protesting with her 'voice' and the joke requires both visual and verbal literacies.

The jokes and meanings of Howell's cartoons can only be understood multimodally, and rely on the space of play between speech and text that Derrida was interested in.
Meanwhile, Powell's text is structured as a Socratic dialogue between two characters which straddle the space between typographic characters and cartoon characters.

2: And that takes time! It's like the definition of a word in a dictionary. "A" says the dictionary, "is the first letter of the English alphabet." But we know what "A" is; you have to know what "letter" is. And to know what "let-ter" is ("any character of the alphabet") you have to know what "character" means, etc. The meaning of "A" never arrives. It is always put off till later—deferred till later.

A: Yes. Difference includes not only the meaning "to differ"—to be different from something else—but to defer, to delay, to put off till later.

and shift between letters, people, and occasionally reptiles...

...as well as hybrid forms, such as in the following passage, where the letter forms come alive to animate a discussion of Mallarme's Mimique, and Derrida's conception of imitation:

The book as a whole highlights the ways writing (linguistic meaning) and drawing (visual meaning) overlap, making the text self-consciously "slippery." Like Derrida's Glas, it presents two different kinds of narratives running side by side, sometimes bleeding into each other.
Interested in the order of things in Foucault's life and work? You'll find it here, organised (mostly) chronologically, and within a (mostly) consistent visual structure! Observe!

Jevtic draws Foucault as the focal point of most pages, sometimes moving surreally through his intellectual life, sometimes in mundane scenes from his personal life (plenty of lovers show up).

The result is that even passages describing Foucault's theories have a biographical feel. Foucault appears as an actor in both mind and body.

Jevtic draws Foucault as the focal point of most pages, sometimes moving surreally through his intellectual life, sometimes in mundane scenes from his personal life (plenty of lovers show up).

The result is that even passages describing Foucault's theories have a biographical feel. Foucault appears as an actor in both mind and body.

Just as representations of Foucault's body are braided throughout the book, so is the repeated motif of bodies under surveillance, analysis and/or investigation.
Under Investigation

This motif is echoed in the visual structure of the pages themselves, where images presented before us are discussed by the text.

Unlike in the other three books, there isn’t much intermingling between words and pictures.

In some ways, this mirrors how Foucault’s ‘This is Not a Pipe’ describes Magritte’s paintings, but barely ventures into their visual realm.

“...dividing the pipe floating in its imagistic heaven from the mundane tramp of words marching in their successive line.”

But even as this division is mostly maintained, the distinction between speech and text is made ambiguous, along with the division between quote and paraphrase...

This is Not a Pipe

Belgian Surrealist artist René Magritte (1898-1967) wrote a letter to Foucault, attempting to explain the difference between stimuli (of things, like the colour of grass) and resemblance (of thought, which resembles the world it sees).

Foucault in his reply and text of 1973 took an example of Eile Magritte’s ‘This is Not a Pipe’ (1929) and ‘The Two Riddles’ (1938). The problem of resemblance—the relation between words and things—is studied in these paintings.

Let’s look at their heterotopic approach—meaning one or other—where the traditional bonds between language and image are disturbed, made different and in tension.

Word balloons are meant to signify a closeness between a ‘speaker’ and their words... but this is not a quote.

Foucault never wrote anything like that in regards to Magritte’s work.

Yet in other places, the text in word balloons DOES come from direct quotes.

This book has no system of separation for these different kinds of ‘speech.’
Introducing Derrida
Totem Books, 1996
WORDS: Jeff Collins
PICTURES: Bill Mayblin

The roles of writer, illustrator and designer are fused in this book more than in any of the others.

On pages like these, the various visual forms of the words carry as much meaning as the words themselves, calling into question the roles of writer and illustrator.

Did Mayblin hand-write that note?

Did Collins establish the visual way those balloons are nested?

Who is responsible for the words in this ransom note?

As in GLias, the book's physical codex form is used as part of its argument — in this section, a word with larger-than-life status in Derrida's oeuvre is spread over six pages.

The term cannot even be read without physical effort — and it might not even be a single term, does the last page's tiny 'ism?' count?
The complexity of the design is at times dazzling, but in places falls into the same trap as Foucault for Beginners, where the design speaks 'Louder than anything else on the page!' If the meaning of the page is about Derrida's critique of binary systems of thought, a reversal of the idea that meanings are either/or. Yet the visual form of these pages, shifts constantly from black on white to white on black, subtly reinforcing the idea of binary opposites. The meanings of these two modalities are not aligned.

Linguistically, these pages are about Derrida's critique of binary systems of thought, a reversal of the idea that meanings are either/or. Yet the visual form of these pages, shifts constantly from black on white to white on black, subtly reinforcing the idea of binary opposites.

Similarly, this page misrepresents Saussure's classic construction of signifier and signified:

Introducing each element individually, like steps in a process, undermines Saussure's central premise that in a sign, signifier and signified cannot exist independently of each other— they are two sides of the same coin.

Furthermore, representing the 'signified' with a close-up photograph implies that it has an external, sensory quality; Saussure's idea was that the signified was entirely mental and internal.

As a result, instead of showing Saussure's theory of signs made of signifying sensory experiences (sound images) linked to signified mental conceptions... the page shows how images and words can be combined to form multimodal signifiers.
Two of the other books also try to explain Saussure's sign, and it's interesting to note that the different approaches they take generally align with the way each book depicts the relationship between image and text.

Saussure's sign is often visually represented as:

- **SIGNIFIED**
- **SIGNIFIER**

It's a way of theorizing the relationship between:

- **THOUGHTS TO WORDS**

Here's an example of how it appears in Saussure's *Course in General Linguistics*:

- "tree" compared to "arboretum"
- "tree" compared to "shrub"  
- **SIGNIFIED**
- **SIGNIFIER**  
- concept of tree, word for tree

The **SIGNIFIED** is represented alternatingly as:

- an image of a tree
- a word - "tree"

but it is both and neither.

The unpictureable, unpronounceable **SIGNIFIED** lies somewhere in the gap between modalities.

Both modalities: "tree" and "shrub" can only depict **SIGNIFIERS**

And so, these gaps, or relationships, between modalities are fertile ground for the creation and construction of meanings.
For example—

Foucault for Beginners explains the arbitrary nature of the relationship between words and their meanings in a passage accompanied by a picture of dozens of Chinese words pointing to a horse, as if to illustrate that any of those words could have an equal (and equally arbitrary) claim to signify the animal.

But the reappropriated horse acupuncture chart is not referred to in the text. It is unclear who drew the picture, or who decided to include it in the book. Like many other images in the book, it has an arbitrary relationship to the text.

Although the two modalities are not clearly linked by authorship or subject matter, meaning can be constructed from their spatial order and proximity.

In Derrida for Beginners, the discussion of the relation of signifier to signified is illustrated with several cartoons, of which this is the most simple and direct.

The abstracted cartoon drawings combine Saussure's 'tree' and 'peg' onto a unified canvas while still holding the visual and linguistic modalities at a distance to each other.

In the same way, throughout the book, words and images inter-relate and refer to each other without interacting directly.

These books represent the same material by constructing different multimodal relationships.

(Introducing Foucault does not discuss Saussure, but its conventional pairing of image and text in an expository and hierarchical way is echoed in the way this text relates to the chart above it.)
As I've tried to show in this analysis of all four books, and in the construction of this paper itself, meanings in a text are reliant on multimodal relationships and combinations.

Comics theorist Thierry Groensteen calls the visual/spatial mesh that contains these relationships the SPATIO-TOPIA, and explains:

"Meaning is braided throughout the network of a comic."

(a paraphrase)

The boundaries between modalities and the categorisations I've used here to describe relationships are not solid, but shifting...

Nevertheless, observing and thinking about the ways modalities combine and relate to each other can be illuminating...

Within this spatio-topia, modalities interact and meanings bounce off of each other to construct an argument which is larger than, and different from, our sense of a book's purely linguistic meaning.
And even texts without pictures construct multimodal arguments.

Most academic publications assume a fairly uniform multimodal structure ... and this is part of their argument —

I belong to act like, and look like other academic discourse.

But as Rius and the books he inspired have shown ...

There are other ways of making, and of thinking about, theoretical arguments.

Derrida's GZ as is an obvious example of a book that makes its visual and spatial modalities explicitly part of its argument. (...an analysis of its spatiotopia would be revealing ...)

And Foucault's 'This is not a Pipe' must be understood in terms of its multimodal forms, as a 'mundane tramp of words' ....... that is presented entirely separate from representative images of Magritte's work...
In an expanding digital media world, we are increasingly relying on literacies which are multiple and multimodal.

Digital humanities as a discipline has shown an interest in producing scholarship which crosses and combines modalities in inventive and unexpected ways.

Looking at the spatio-topical multimodal relationships in educational comics like the “Introducing” and “For Beginners” books can help us to challenge & re-evaluate normative academic discourses and hegemonic textual practices, including those which are reinforced and perpetuated by digital technologies.

Many years before digital humanities, cartoonist-scholars like Rius were doing the same thing!

Or in other words...

Comics can show us new ways of thinking about language & power.
Creator’s Statement

Within the humanities, a lot of discourse traditionally has taken the form of writing which discusses other pieces of writing, even when the object of study is something that can’t easily be expressed in prose writing, like a comic book or a computer program. One of the many things scholars in the digital humanities have attempted to do is to expand the discipline’s acceptable research outputs to include things like pieces of code, web applications and other forms of digital discourse which can work in ways that prose cannot.

Although this paper only marginally engages with conversations around digital technologies, it is similarly concerned with pushing at the boundaries of what published research can be, and how it can work. To discuss the subjects of the paper, two pairs of comic books about Foucault and Derrida, I adopted the form and register of those subjects. This is a comic which analyses other comics, using the tools and techniques of comics.

On a broader level, though, it’s about how all discourse uses multiple modalities. There are arguments in this paper which are composed mostly through visual and spatial modalities, but I would argue that all printed texts do this, even (or especially) when we have come to accept their multimodal forms as essentially invisible, as we tend to do with most academic writing.

One of my goals with this paper was to denaturalise the visual and spatial forms that research papers usually take. I wrote the text by hand, and composed the pages as integrated units which cannot easily be pulled apart or rearranged without losing some of their meanings. ‘Writing’ in this way was a challenge. It took more time and physical effort to write and edit each sentence using a pen and paper than it would have using a word processor. I am used to editing my writing by ‘talking’ through it – reading it out loud in my head to check for flow and coherency, but this paper’s visual qualities and modular construction required a different approach. Each page had to work on its own, while having a reasonably clear function within the larger paper.

The process of composing this paper was iterative and multimodal. I wrote a 10,000 word thesis chapter on the books about Foucault and Derrida, and discussed them as part of a seminar presentation before starting on the comic version of the paper, so I was familiar with different ways of presenting the material. The comics form allowed me to show visual ‘quotes’ from the comics that I could engage with directly, which cut down the number of words I had to use dramatically. I was able to ask questions verbally and answer them visually, or vice versa.
Composing and editing the paper was largely done by sketching up drafts of pages, and gradually revising the writing, drawings and layout of each page, often simultaneously. To integrate pages from the books with my sketches, I would scan both into my computer and quickly assemble them onto a page in Microsoft Paint, an infamously straightforward drawing program which suited my purposes. Each page was then printed out and slid underneath a piece of tracing paper to allow me to draw a new version based on the mock-up. My final inked-in pieces of tracing paper were then scanned back into the computer and the images of the books were pasted onto them with Paint. I also took the opportunity to do small fixes and clean-ups using the software. This system was very iterative and more time-consuming than I would have liked, as it involved a lot of scanning and going back and forth between computer and paper.

Using the style of the books that I was examining helped to reveal aspects of those books that I would not have otherwise noticed, and gave me a different perspective on other aspects of the material as well. For example, while drawing caricatures of the people I was quoting, I was confronted with questions about the shapes and ages of their bodies, things that I would not have considered if I didn’t have to draw them. I had to ask whether it mattered if I depicted my sources as they looked when their words were first published, or as they looked when my paper was published. It was only when I noticed that I was drawing a lot of facial hair and receding hairlines that I realised how few women appear in this paper.

The other major benefit of using the comics form was that it allowed me to argue more directly for the validity of comics as a form of scholarship, and to ask readers to reflect on the ‘invisible’ multimodal properties of academic publishing. This was, in a sense, putting my money where my mouth was.

Digital, networked technologies are enabling scholarship in the humanities to take on increasingly complex multimodal forms, but educational comics make it clear that multimodal scholarship itself is not a new phenomenon. Looking at earlier forms like this can help us to reconsider the histories and traditions of academic writing in the humanities, and suggest ways of approaching the creation of multimodal texts outside the context of networked computer ecologies.
Acknowledgements:

I am indebted to Michael Wilmore, Sal Humphreys and Chad Habel for their encouragement and assistance, to the reviewers of this article for their insights and probing questions, and to this issue’s editors, Anastasia Salter and Roger Whitson, for initiating and guiding this collection of comics as scholarship.

The field of cartoonist-scholars is small, but growing. I am encouraged by the recent and ongoing work being done by Muna Al-Jawad, Marek Bennett, Jared Rosello, Nick Sousanis and other cartoonists who are using comics to reflect on the processes of learning and thinking.

The citation style used in this article was inspired by Muna Al-Jawad’s 2013 article, ‘Comics are Research: Graphic Narratives as a New Way of Seeing Clinical Practice’, with added frames around the numbers to make things clearer.

The comics of Scott McCloud, Lynda Barry and Kevin Huizenga are showcases of wonderfully unique ways of explaining abstract ideas with words and pictures, and are heartily recommended to readers who remain unconvinced after reading this humble attempt.

Thanks are also due to Kimberly Humphrey for always cheering me on, reading innumerable drafts, and keeping the tea and biscuits well-stocked.

Dedication:

To Mrs. LaFountaine, who chewed me out for doodling pictures on the back of my assignments, and tried her noble best to teach a bunch of seven year olds how to keep their handwriting slanted at a consistent angle, a task that I clearly have not mastered over twenty years later.
