Design of a VLSI Motion Detector
Based Upon the Insect Visual System

Alireza Moini
B.Sc. Sharif University of Tech. Tehran-Iran
Thesis submitted for the degree of
Master of Engineering Science
in
The University of Adelaide
Department of Electrical and Electronic Engineering
Supervisor: Associate Professor Kamran Eshraghian

September 1993
This work contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text.

I give consent to this copy of my thesis, when deposited in the University Library, being available for loan and photocopying.

SIGNED: ____________________ DATE: 10 July 1994
Acknowledgements

I am indebted to the direct or indirect contributions of many people. My supervisor Prof. Eshraghian deserves special praise for his generous encouragement and guidance which has been a great support for the progress of the research. My two friends and colleagues, Andre Yakovleff and Thong Nguyen with their assistance in many stages of the design and test, have a great share in completing the project. I should thank Dr. Abdesselam Bouzerdoum from whom I learned the first steps in understanding the neurobiology and modeling of insect visual system, and Mr. Derek Abbott for his assistance on providing me the theoretical and practical knowledge on photodetectors.

There are other contributors to the project in the research team, namely Prof. R. E. Bogner, Mr. Kim Ook\textsuperscript{1}, and Mathew Parry, who have actively elaborated on the project, and should be thanked.

Professor Adrian Horridge is the initiator of the elegant idea of the template model for insect vision. We all, in the Bug-Eye team, are indebted to his theoretical support in the early stages of the project by offering the idea of utilizing the insect vision for computer vision applications.

Once again I should thank Dr. Bouzerdoum, Michael, and Derek for reading, correcting and giving constructive suggestions on my ocean-of-errors thesis and saving time from future readers.

I must express my gratitude to my mother and father who have been my constant support.

And finally I should thank the Ministry of Culture and Higher Education of the Islamic Republic of Iran for providing me the scholarship and the opportunity for studying during this period.

Alireza Moini
