RECEPTOR MECHANISMS - DEFINITION OF SOME COMMON TERMS	xv
CHAPTER 1 - INTRODUCTION	1
1.1 GENERAL ANAESTHESIA	1
1.1.1 Definition of General Anaesthesia	1
1.1.2 A Brief History of Anaesthesia	3
1.1.3 Sites of Action of Anaesthesia	4
1.1.4 Mechanisms of Anaesthesia	6
1.1.5 Stereoselectivity of Anaesthetic Agents	11
1.2 POTASSIUM CHANNELS	13
1.2.1 An Introduction to Potassium Channels	13
1.2.2 Voltage-Activated K ⁺ Currents	15
1.2.2.1 Delayed (outward) rectifier current (I _{K(V)})	15
1.2.2.2 Fast transient current (I _{K(A)})	15
1.2.2.3 Rapid delayed current (I _{K(VR)})	15
1.2.2.4 Slow delayed current (I _{K(VS)})	16
1.2.2.5 Muscarinic-inactivated current (I _{K(M)})	16
1.2.2.6 Inward (anomalous) rectifier current (I _{K(IR)}) ...	16

1.2.2.7	Calcium-activated K ⁺ currents	16
1.2.3	Ligand-Activated K ⁺ Currents	17
1.2.4	Other K ⁺ -Specific Channels	17
1.3	GABA PHARMACOLOGY	18
1.3.1	History of GABA	18
1.3.1.1	History of GABA _B -receptors	19
1.3.2	An Introduction to GABA-Receptors	20
1.3.2.1	GABA _A -receptors	20
1.3.2.2	GABA _B -receptors	22
1.3.2.3	GABA-autoreceptors	23
1.3.3	GABA-Receptor Distribution	23
1.3.4	GABA-Receptors and Excitatory Transmission	24
1.3.5	GABA _B Receptor Electrophysiology	25
1.3.5.1	GABA _B -receptors and Ca ²⁺ channels	25
1.3.5.2	GABA _B -receptors and K ⁺ channels	26
1.3.6	Absence Epilepsy	27
1.4	ANAESTHESIA AND EXCITATORY OR INHIBITORY TRANSMISSION	28
1.5	ANAESTHESIA AND GABA-RECEPTORS	31
1.5.1	Effects of Anaesthetics on GABA _A -Receptor Channel Kinetics	34
1.6	ROLES OF ION CHANNELS, TRANSMITTER RELEASE AND SECOND MESSENGERS IN ANAESTHESIA	35
1.6.1	Anaesthesia and Na ⁺ Channels	35
1.6.2	Anaesthesia and K ⁺ Channels	36
1.6.2.1	A novel neuronal K ⁺ current	37
1.6.3	Anaesthesia and Metabotropic Receptors	37
1.6.4	Anaesthesia and Ca ²⁺ Channels	38
1.6.5	Anaesthesia and Transmitter Release	39
1.6.6	Anaesthesia and Second Messengers	40

CHAPTER 2 - SPONTANEOUS EPILEPTIFORM DISCHARGES	42
2.1 ROLE OF NON-NMDA GLUTAMATE RECEPTORS IN EPILEPTOGENESIS	48
2.1.1 Kainic Acid	49
2.2 ROLES OF CALCIUM CHANNELS AND NEUROTRANSMITTER RELEASE IN EPILEPTOGENESIS	50
2.3 ROLE OF POTASSIUM CHANNELS IN EPILEPTOGENESIS	51
2.4 ROLE OF CYCLIC AMP IN EPILEPTOGENESIS	52
 CHAPTER 3 - RECORDING FROM BRAIN SLICES	54
3.1 COMPUTER-BASED ELECTROPHYSIOLOGICAL DATA ACQUISITION AND ANALYSIS	54
3.2 POPULATION DISCHARGE (EXTRACELLULAR FIELD POTENTIAL) RECORDING	57
3.3 A GREASE-GAP RECORDING MODEL	58
3.3.1 Experimental Procedures	58
3.3.2 An Introduction to ASYST Version 2.1	65
3.3.3 Metrabyte DASH-16F Board	67
3.3.4 Interface Circuit Box	68
3.3.4.1 Instrumentation amplifiers	69
3.3.4.2 Earthing and power supply arrangements for the interface box	70
 CHAPTER 4 - EVOKED POTENTIAL RECORDING FROM RABBIT BRAIN	73
4.1 AN INTRODUCTION TO WHOLE-ANIMAL DATA ACQUISITION AND PROCESSING SYSTEM	73
4.1.1 Analogue Stimulator Output	76
4.1.2 Analogue-to-Digital External trigger Input	76
4.1.3 Digitimer	77
4.1.4 Gated Pulse Generator	78

4.1.5	Isolated Stimulator	78
4.1.6	Stimulating Electrodes	79
4.1.7	Recording Electrodes	80
4.1.8	Amplifier and Filter	82
4.1.9	Baseline Stabiliser	83
4.1.10	Data Acquisition and Analysis Software	84
4.2	EVOKED POTENTIAL RECORDING FROM STRUCTURES IN RABBIT BRAIN	85
4.2.1	General Anaesthesia	86
4.3	EXPERIMENTAL PROCEDURE	92
4.3.1	Perfusion and Sectioning	95
4.4	RESULTS AND DISCUSSION	96
CHAPTER 5 – EFFECTS OF POTASSIUM CHANNEL BLOCKERS ON EPILEPTIFORM DISCHARGES RECORDED FROM RAT NEOCORTICAL SLICES IN VITRO		
5.1	SPONTANEOUS DISCHARGES WITH AFTER-ACTIVITY	113
5.2	EFFECTS OF NMDA ON SPONTANEOUS DISCHARGES	116
5.3	EFFECTS OF TEA ON SPONTANEOUS DISCHARGES	119
5.3.1	Phase-Plane Plot Study	127
5.4	EFFECTS OF CCh ON SPONTANEOUS DISCHARGES	130
5.5	EFFECTS OF CsCl ON SPONTANEOUS DISCHARGES	135
5.6	EFFECTS OF 4-AP ON SPONTANEOUS DISCHARGES	140
5.7	EFFECTS OF BaCl ₂ ON SPONTANEOUS DISCHARGES	146
5.8	EFFECTS OF SrCl ₂ ON SPONTANEOUS DISCHARGES	154
5.9	EFFECTS OF CoCl ₂ ON SPONTANEOUS DISCHARGES	156
5.10	EFFECTS OF REDUCING EXTERNAL Ca ²⁺ ON SPONTANEOUS DISCHARGES	158
5.11	EFFECTS OF CAFFEINE ON SPONTANEOUS DISCHARGES	161
5.12	BASELINE POTENTIAL SHIFT	164

CHAPTER 6 - POWER SPECTRUM ANALYSIS OF DISCHARGES WITH
AFTER-ACTIVITY RECORDED FROM RAT NEOCORTICAL
SLICES IN VITRO

.....	167
6.1 INTRODUCTION	167
6.2 FOURIER TRANSFORM AS A CLASSICAL SPECTRAL ANALYSIS METHOD	169
6.3 MODERN SPECTRAL ANALYSIS TECHNIQUES	171
6.3.1 Non-Parametric Methods	174
6.3.2 Parametric Methods	174
6.3.2.1 Yule-Walker method	176
6.4 RESULTS AND DISCUSSION	179
6.5 CONCLUSIONS	200

CHAPTER 7 - EFFECTS OF GABA_A- AND GABA_B-RECEPTOR AGONISTS
AND ANTAGONISTS ON SPONTANEOUS EPILEPTIFORM
DISCHARGES RECORDED FROM NEOCORTICAL SLICES
IN VITRO

.....	201
7.1 EFFECTS OF GABA AND 3-AMINOPROPYLSULPHONIC ACID ON SPONTANEOUS NEOCORTICAL DISCHARGES	202
7.1.1 Muscimol, THIP, and Propofol as Notable GABA _A - Receptor Agonists	211
7.2 EFFECTS OF BICUCULLINE METHIODIDE ON SPONTANEOUS NEOCORTICAL DISCHARGES	212
7.3 EFFECTS OF BACLOFEN AS A GABA _B -RECEPTOR AGONIST ON SPONTANEOUS NEOCORTICAL DISCHARGES	219
7.4 EFFECTS OF A MIXTURE OF BACLOFEN AND 3-APS ON SPONTANEOUS NEOCORTICAL DISCHARGES	233

7.5	INVESTIGATION OF THE VALIDITY OF THE EQUATION BMI + GABA - BACLOFEN + BMI	236
7.5.1	Effects of GABA on Spontaneous Neocortical Discharges in the Presence of DABA	240
7.6	EFFECTS OF 4-AMINOBUTYLPHOSPHONIC ACID ON SPONTANEOUS NEOCORTICAL DISCHARGES	252
CHAPTER 8	INTERACTION STUDIES BETWEEN BACLOFEN AND POTASSIUM CHANNEL BLOCKERS	259
8.1	EFFECTS OF BACLOFEN ON THE RESPONSE OF A NEOCORTICAL SLICE TO TEA	260
8.2	EFFECTS OF BACLOFEN ON THE RESPONSE OF A NEOCORTICAL SLICE TO CCh	262
8.3	EFFECTS OF BACLOFEN ON THE RESPONSE OF A NEOCORTICAL SLICE TO CsCl	264
8.4	EFFECTS OF BACLOFEN ON THE RESPONSE OF A NEOCORTICAL SLICE TO 4-AP	266
8.5	EFFECTS OF BACLOFEN ON THE RESPONSE OF NEOCORTICAL SLICES TO BaCl ₂	268
SUMMARY AND CONCLUSIONS		272
APPENDIX A.3.1	A Method for Chloriding Silver Electrodes	273
APPENDIX A.3.2	- Temperature Controller	274
APPENDIX A.3.3	- Low-pass and Notch Filters	275

ABSTRACT

Despite almost a century of research, the mechanisms of anaesthesia remains obscure. Stereoselectivity of anaesthetic agents supports interaction of anaesthetic agents with cellular protein targets rather than an indiscriminate perturbation of the lipid bilayer as was previously proposed. In general, at neural level anaesthesia is produced by reducing excitation or enhancing inhibition. In the 1990s, the hypothesis that anaesthetics in large part produce their pharmacological actions at specific loci on the GABA_A-receptor complex has become most favoured. In this thesis, possible neural mechanisms of action of general Anaesthesia are introduced.

Preliminary evoked potential recordings from the brain of anaesthetised rabbits are presented, before proceeding to report *in vitro* studies of a slice preparation from rat brain using a grease-gap recording model which allows detailed investigations in a relatively undisturbed, but controlled environment. Cellular excitatory mechanisms leading to spontaneous epileptiform discharges in the neocortical slices in a Mg²⁺-free artificial cerebro-spinal medium are discussed.

Potassium channels control cell excitability and its firing properties. The study of effects of various classical potassium channel blockers on spontaneous discharges from neocortical slices has revealed that, as well as causing tissue excitability, each agent has definite signatory effects on individual discharges. Modern spectral analysis of the

after-activity of responses enabled numerical values for frequency and power density of control, and discharges in the presence of each potassium channel blocker to be obtained.

4-Aminobutyric acid (GABA) is the major inhibitory neurotransmitter in the central nervous system, its actions being mediated through both GABA_A- and GABA_B-receptors. The effects of GABA_A- and GABA_B-receptor agonists and antagonists on spontaneous discharges in the slice model are presented and discussed. These studies suggest that agents acting on GABA receptors can intensely modulate neuronal activity, providing a conceivable basis for the actions of both analgesic and anaesthetic agents.

Finally interaction studies between baclofen, a GABA_B-receptor agonist, and various potassium channel blockers identifies baclofen as a potent agent in diminishing or abolishing spontaneous discharges. These studies show that, with the exception of Ba²⁺, baclofen is capable of suppressing the hyperexcitability induced by potassium channel blockers.
