SUGAR ACCUMULATION IN THE DEVELOPING GRAPE BERRY

by

Spencer C. Brown, B.Ag.Sc. (Adel.)

Department of Plant Physiology
Waite Agricultural Research Institute
The University of Adelaide
South Australia

Thesis submitted for the Degree of
Doctor of Philosophy

January, 1981

Frontispiece: T.A. Bramley in Finean *et al.* (1978) with permission.

TABLE OF CONTENTS

	Page
SUMMARY	x
STATEMENT	xiii
PREFACE	xiv
LIST OF FIGURES	xv
LIST OF TABLES	xx
LIST OF SYMBOLS AND MISCELLANEOUS ABBREVIATIONS	xxiii
LIST OF ABBREVIATIONS (CHEMICALS)	xxiv
CHAPTER 1. DEVELOPMENT OF THE GRAPE BERRY	
1.1 The grape inflorescence	1
1.2 Designation of development	3
1.3 Ontogeny of the pericarp	4
1.4 The cuticle	6
1.5 Vascular connections	7
1.6 Constituents of the berry	7
a. Introduction	7
b. Water and carbohydrates	8
c. Organic acids	10
d. Minerals	11
e. Nitrogen	12
f. Adenylates	12
g. Phenolics	12
h. Enzymes	13
1.7 Studies of gaseous exchange	14
1.8 Malate, its enzymes and gluconeogenesis	17
1.9 Hormones	18
1.10 Interactions of other factors	20
CHAPTER 2. THE PROCESS OF VERAISON	
2.1 What regulates ripening?	21
2.2 ¹⁴ C studies	23
2.3 Does the route of solute transfer change?	25
2.4 Specific studies of veraison	25
2.5 Water and osmotic relationships	28
2.6 Summary	30
CHAPTER 3. METABOLISM OF SUCROSE, GLUCOSE AND FRUCTOSE	
3.1 Introduction	32
3.2 Structures	32

3.3	Metabolism	34
3.3a	Starch biosynthesis and degradation	34
3.3b	Sucrose synthesis	35
3.4	Pathways of Carbon Metabolism	36
3.4a	Regulation	36
3.4b	Examples of integration	37
3.4c	Ambiquitous enzymes	37
CHAPTER 4. TRANSPORT IN HIGHER PLANTS : CONCEPTS AND TERMINOLOGY		
4.1	Introduction	43
4.2	Membrane Structure	45
4.3	Membrane Flux	45
4.4	Mediated Processes	47
4.5	Active Transport	48
4.6	Other Transport Processes	51
CHAPTER 5. TRANSPORT PROCESSES IN HIGHER PLANTS : SPECIFIC EXAMPLES		
5.1	Cotransport of Sugars	53
5.2	Transport Metabolites	54
5.3	Group Transport of Sugars	54
5.4	Sugar Accumulation in Sugarcane	57
5.5	Integration of Processes by Cotransport	58
5.6	<i>In Vitro</i> Diffusion	58
5.7	Superimposed Processes?	59
5.8	Vesicular Transport	60
CHAPTER 6. THE USE OF PROTOPLASTS IN TRANSPORT STUDIES		
6.1	Protoplasts as a Tool in Fruit Physiology	61
6.2	Is the Physiology of the Protoplast Representative?	63
6.3	Perturbed Metabolism	63
6.4	Electrical Properties	64
6.5	"Recovered" Protoplasts	65
6.6	The Literature	66
6.7	Protoplasts in Uptake Studies	66
CHAPTER 7. THE VACUOLE OF HIGHER PLANTS AND TRANSPORT AT THE TONOPLAST		
7.1	Introduction	72
7.2	Tonoplast	73
7.3	Functions of the Vacuome	75
7.3a	Regulatory function	75
7.3b	Accumulative function	77
7.3c	Lytic function	79
7.3d	Defence function	80

7.4	Technique for Isolation	81
7.5	Transport at the Tonoplast	87
7.6	ATPase	88
7.7	Comments on Sugar Accumulating Mechanisms	89
CHAPTER 8. EFFLUX STUDIES OF HEXOSE COMPARTMENTATION IN THE DEVELOPING GRAPE BERRY AND THE EFFECTS OF SHADING		
8.1	Introduction	94
8.2	Materials and Methods	95
8.3	Results	99
8.4	Discussion	106
	8.4.1 Sugar in the developing grape berry	106
	8.4.2 Effect of shading	108
8.5	Conclusions	112
CHAPTER 9. ISOLATION OF PROTOPLASTS AND VACUOLES		
9.1	Protoplasts	114
	9.1.1 Initial protocol for protoplast preparation	114
	9.1.2 Losses	115
	9.1.3 Alternative osmotica	115
	9.1.4 A mannitol series	115
	9.1.5 Protoplasts from berries in the first growth cycle	117
	9.1.6 Effects of ions and other additives	118
	9.1.7 Geometry of the incubation vessel	120
	9.1.8 Cell-wall degrading enzymes	120
	9.1.9 Summary and protocol	121
9.2	Protoplast yield and agglutination	122
	9.2.1 Chlorophyll as an index of yield	122
	9.2.2 Concanavalin A with protoplasts	126
9.3	Vacuoles	127
	9.3.1 Vacuole isolation	127
	9.3.2 Counts and yields	127
	9.3.3 Key variables of the protocol	127
9.4	Microscopy	129
	9.4.1 Observations of lysis	129
	9.4.2 Micrographs and fluorescence	131
	9.4.3 Electronmicrographs	132

CHAPTER 10. PURIFICATION OF PROTOPLASTS AND VACUOLES

10.1	Introduction	148
10.2	Filtration	148
10.3	Phase Distribution	150
10.4	Centrifugation	151
10.4.1	Materials	151
10.4.2	Differential pelleting : Ficoll	152
10.4.3	Metrizamide	155
10.4.4	Ludox and Percoll	157
10.5	Discussion	159

CHAPTER 11. MEMBRANE TRANSPORT STUDIES WITH ISOLATED PROTOPLASTS AND VACUOLES

11.1	Introduction	161
11.2	Materials and Methods	163
11.3	Results and Discussion	168
11.3.1	Protoplasts : Uptake of glucose and sucrose	168
11.3.2	Competition by deoxyglucose but not raffinose	169
11.3.3	Alternative glucose radionuclides with protoplasts	172
11.3.4	Interaction of glucose and fructose	174
11.3.5	Effect of pH	174
11.3.6	Effect of pressure upon uptake by protoplasts	178
11.3.7	Vacuoles : Uptake of glucose and sucrose	180
11.3.8	Variability between experiments	182
11.3.9	Uptake by vacuoles from stored berries?	186
11.4	General Discussion	188

CHAPTER 12. SUBSTRATE DEPENDENCY OF SUGAR UPTAKE BY PROTOPLASTS AND ISOLATED VACUOLES

12.1	Introduction	191
12.2	Materials and Methods	191
12.3	Results and Discussion : Protoplasts	193
12.3.1	Data from protoplasts	193
12.3.2	Efflux	193
12.3.3	The nature of "zero-time uptake"	196
12.3.4	Algebraic description of accumulation	198
12.3.5	And the physical basis?	200

12.4	Results and Discussion : Vacuoles	203
12.4.1	Data from vacuoles	203
12.4.2	The relative rates of accumulation	206
12.4.3	Zero-time uptake may have a different source in vacuoles	208
12.5	Conclusions	209
CHAPTER 13. RADIOCHEMICAL LABELLING FROM THE INCUBATION OF SKIN SEGMENTS, PROTOPLASTS AND VACUOLES OF THE GRAPE BERRY		
13.1	Introduction	211
13.2	General Materials and Methods	212
13.3	Labelling patterns in skin segments	215
13.3.1	Results	215
13.3.2	Discussion	220
	(i) The distinctive nature of each fraction	220
	(ii) X, Y, Z	220
	(iii) On specific activities	220
	(iv) Sucrose	222
	(v) Glucose, fructose and isomerization	222
	(vi) Changes upon storage	225
13.4	Electrophoresis of ^{14}C -compounds	225
	Results and Discussion	225
	(i) Mobility of standards in electrophoresis and chromatography	225
	(ii) X^1 , Y^1 , Z^1	227
	(iii) Labelling of galactose	232
13.5	^{14}C labelling in protoplasts and vacuoles	234
	Results and Discussion	234
	(i) Metabolism of sucrose and isomerization of glucose in protoplasts	234
	(ii) Evidence for fructose-, glucose- and sucrose- phosphate from protoplasts	238
	(iii) Accumulation of Z^1 is cytoplasmic	238
	(iv) Z^1 was not labelled from $3\text{-}^3\text{H}$ -glucose, but rapidly from $\text{U-}^{14}\text{C}$ -G6P	240
	(v) Sucrose synthesis and hydrolysis by isolated vacuoles	241
13.6	General discussion	245

CHAPTER 14.	INTEGRATIVE DISCUSSION	
14.1	Preamble	247
14.2	Mediated Transport	247
14.3	Indeed, Group Transport ...	248
14.4	Sucrose Synthesizing Apparatus	249
14.5	Hexose compartmentation in the developing grape berry	250
14.6	<i>Inter alia</i>	252
14.7	Conclusion	254
BIBLIOGRAPHY		256
