STUDY OF TROPICAL DISEASES.

DONATION FROM ENGLAND.

Bishop Frockham of North Queensland, has scored a notable success with the representatives he made when in England to the Government, in favor of the grant of an Imperial subsidy to the recently established school for the study of tropical diseases at Townsville.

Mr. Batchelor (Minister of External Affairs) announced, on behalf of the Government of Queensland, that the school would be established and that the funds were already available to begin work.

IN AUSTRALIAN TROPICS.

STUDY OF DISEASE.

BISHOP FROCHHAM AND THE INSTITUTE.

January 20.

On his return from England by the steamer Commonwealth today, Dr. Frochham, Bishop of North Queensland, was questioned about the recent developments initiated by himself for the promotion of the study of diseases peculiar to the tropical climates where he has worked.

"On my arrival in England last month, I applied, with the approval of the University of Melbourne, to the Colonial Secretary, and he referred me to the Colonial Secretary, who promised to forward my request to the Advisory Committee of the Imperial Tropical Diseases Research Fund, in order to facilitate our work. I am confident that we shall be able to secure the assistance of the advisory committee, and that the funds are available for the establishment of the institute.

I have already secured an important grant from the Lister Institute of Preventive Medicine, in London. I have secured a grant of £500 for the establishment of the institute.

I am organizing arrangements for the establishment of the institute, and I am confident that we shall be able to secure the assistance of the advisory committee, and that the funds are available for the establishment of the institute.

TROPICAL DISEASES.

"Can tropical Australia be developed and its resources utilized by white men? That there are possibilities of making these regions contribute enormously to our national wealth is beyond doubt. The foundation of an institute of tropical medicine at Townsville should have an important bearing on the matter. Dr. Frochham, Bishop of North Queensland, has for a long time pressed interested bodies for this, and it is largely absorbed in his labors that so much progress has been made with the scheme for inaugurating systematic scientific research into tropical diseases which affect Australia. His energetic and practical conduct of the project attracts attention to the advantages which might reasonably be expected from the investigations of such a school, of medical men, but also with devising means for bringing the individual existence. Specializing on different diseases, and making a careful study of the condition of climate and country in which they occur, have long been recognized. The result is that the diseases have been modified, and the most promising remedies have been adopted. The result has been that the diseases have been modified, and the most promising remedies have been adopted. The result has been that the diseases have been modified, and the most promising remedies have been adopted.

The physicians have been organized, in order to reduce the spread of the diseases. The results of the research work have been very encouraging. A number of institutions have been established, and the work is progressing.

The result is that the diseases have been modified, and the most promising remedies have been adopted.
