THE UNIVERSAL RACES CONGRESS.

SCIENCE AND THE MILLENNIUM.

(From a Member of the Congress.)

What a pleasantly, socially, and factually informative gathering this is! The good people have not failed to discuss, in the light of the century, the relation of the new sciences to the old and the future of the East and the West. They have met, after a long division between the races, with a view to encouraging the present and the future, and to making friendly feelings, and a hearty co-operation of minds.

They have met, not to criticise, but to discuss the methods by which we are to achieve one of the greatest of all purposes, the science of the world.

To discuss it in two lights, that is to say, in two ways, so untruly, but so indispensible, but still rather in the latter, because it is the only way in which we can understand the minds of those who are not afraid of a question.

On the whole it must be admitted that the Congress was an altogether successful one, a double-handed Congress; it kept its promises; it fulfilled its wishes; and the situation was such that one could not but be pleased with the result. It was a great meeting, a great event, a great opportunity, and one for which the world will be thankful.

The arguments of the many speakers were so great and so convincing that the conference, in its entirety, told in favour of the true meaning of science.

Science is the greatest and the most important of all purposes, the science of the universal race.
