Canada having a better market for her corn - she will sell these here rather than in England. Moreover, if Canada takes an exception to the treaty on this score, the right to wave the threat by ignoring our Canadian foodstuffs, has lowered in value, due to the loss of the Canadian farmer and manufacturer, who will be able to better his terms. Now, following England's example, the United States have abandoned the idea of selling their corn to Canada. All that is left for Canada's government to do is to continue its plan of selling surplus food, to the United States. This will mean that the United States will have to buy corn from Canada, and that it will also mean that Canada will have to buy corn from the United States. This will mean a substantial increase in the price of corn in the United States, and a substantial decrease in the price of corn in Canada. The price of corn in the United States will increase, and the price of corn in Canada will decrease.

TO THE SOUTH.

DR. MAWSON'S AEROPLANE

LONDON, Aug. 16.

The tests have been completed of the monoplane constructed for the use of Dr. Mawson's Antarctic expedition. Mr. Watkins, who assisted in the party as a driver, believes that the vessel is capable of remaining in the air for five hours with a passenger, as well as the aeroplane, and that it will be able to cover 200 miles of the final journey to the Pole.

MAWSON EXPEDITION.

Last week a dispatch stated on the Premier (Hon. J. Veern) and asked that the Government should contribute £30,000 towards the cost of Dr. Mawson's Antarctic expedition. It is hoped that the Federal Government, and perhaps some of the other State Governments, will generously contribute to the expedition, in order to work as much to the greatest extent in the Commonwealth to work as much to the benefit of the Expedition. The State Cabinet at its meeting yesterday decided to ask Parliament to vote £30,000 towards the cost of Dr. Mawson's Antarctic expedition. It is hoped that the Federal Government, and perhaps some of the other State Governments, will generously contribute to the expedition, in order to work as much to the greatest extent in the Commonwealth to work as much to the benefit of the Expedition.

DR. MAWSON'S EXPEDITION.

The fact that the South Australian Government has decided to recommend Parliament to grant £30,000 towards the cost of Dr. Mawson's Antarctic expedition, is a good step in the direction of the establishment of the Federal Government. As a result, it is hoped that the South Australian Government will make a large contribution to the Expedition, in order to work as much to the greatest extent in the Commonwealth to work as much to the benefit of the Expedition.
