REVIEW OF BOOKS.

Professor Mitchell’s New "Structure and Growth of the Mind.

"Structure and Growth of the Mind," by W. Mitchell, D.D., Professor of Philosophy, University of Adelaide; Macmillan and Co., London, is one of the most interesting and illuminating books with which we have had the pleasure of reading. It is a work of profound thought, and we are not surprised that it has been so long in preparation. The book is divided into three parts: the first, "The Nature of the Mind," the second, "The Growth of the Mind," and the third, "The Influence of the Mind on the Body." The book is written in a clear and concise style, and the author has been careful to present his ideas in a logical and systematic manner.

In the first part, the author discusses the nature of the mind, and he argues that the mind is not a thing, but a process, a series of events, and a series of experiences. He contends that the mind is not a static entity, but a dynamic entity, a process that is constantly changing and developing.

In the second part, the author discusses the growth of the mind, and he argues that the mind is not a static entity, but a dynamic entity, a process that is constantly changing and developing. He contends that the mind is not a static entity, but a dynamic entity, a process that is constantly changing and developing.

In the third part, the author discusses the influence of the mind on the body, and he argues that the mind is not a static entity, but a dynamic entity, a process that is constantly changing and developing. He contends that the mind is not a static entity, but a dynamic entity, a process that is constantly changing and developing.
