30 September 2005
Abstract

This study attempts to explore and to understand the use of computers in English language classrooms, in a Malaysian context. This qualitative study aims to investigate and understand the use of computers in English language classes in a secondary Smart School in Malaysia by examining the teaching situations and the types of activities carried out in the classroom. In order to understand the factors related to computer use, teachers’ and students’ attitudes towards the use of computers in English lessons were investigated. Using the perspectives from social constructivism, this study examines, this study also looks into classroom interactions to examine the English language learning opportunities for students.

A combination of procedures was used for data collection. The data were collected using classroom observations, interviews, field-notes, document, learning diaries and classroom interaction transcripts. The data were analyzed using multiple analyses. This study use thematic analysis as one of the analysis method to examine the interviews, and observations field notes.

This study shows that computers in the classroom can be beneficial as tools for facilitating learning English. This study also suggests that in order for the integration of computers in education to be a success the education system needs to be changed or to be adjusted. This study helps to explain the complexity of using computers in the teaching of English as a Second Language in order to fulfil the objectives of the English syllabus and the English curriculum in a Malaysian secondary school.
Statement of authorship

This thesis contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text.

I give consent to this copy of my thesis, when deposited in the University Library, being available for loan and photocopying.

Acknowledgement

There are many people that I would like to express my gratitude and appreciation for helping me during my lonely years of study. Without them the journey would not be completed.

First of all, I would like to thank, Dr Peter Mickan who had patiently guided and supported me throughout the duration of my study years. My appreciation is also to Professor Peter Mühlhäusler who had guided me during the early stage of my study.

Secondly, I would like to express my thanks to all my friends, especially those in room 708 whom had spent all the ups and downs with me during the finishing up days of my thesis.

This acknowledge is also for Brodie Beales, Allison Ebeling, Sariah Willoughby, Ray Adam, Georgina Gordan and Shu-Hui Yu for doing the proof-reading and editing of my thesis.

My great appreciation is also to the University Kebangsaan Malaysia and the Malaysian Government who had given me the opportunity to pursue my study by giving me the scholarship. My gratitude is also for teachers and students who had participated this study.

This project would not have been completed without the support from my family. I am deeply thankful to my beloved husband, Mohd Azhar bin Khalid who had given me the encouragement and support, who had taken the responsibility of taking care of our four children while I was away, and who believed that I could achieve my goal. To my children Nor Suriani, Ahmad Nazri, Ahmad Nizar and Nor Sazuliana, thank you for your understanding and uncomplaining years. Ibu and Ayah, thank you for your encouragement.

Thank you
