An Adelaide Scientist's Work

By Our Special Reporter

Students of the University of Adelaide and others, including Mr. T. Brailsford Robertson, who took the BSc. degree in 1905, and who will need no special reminder to enable them to recall with that brilliant group through the physiology course under Dr. Stirling. The promise that he gave of a great career is being amply fulfilled after eight years' sojourn in America. He has come back to South Australia with the degree of Ph.D. and DSc. after his name, and bearing the title of Associate Professor of Physiological Chemistry and Pharmacology at the University of California. This does not mean that Dr. Robertson has devoted himself to research and made discoveries that redounded greatly to his credit. Only the last six years' work at the University at which he graduated. I found Dr. Robertson yesterday at the house of his father-in-law, and that he had just married the daughter of his professor. He referred to his marriage when speaking last night of his last six years' work in South Australia. When I asked him about the University, he said: "I have been there only a few months, but I have seen a great deal of it. The University is a great place, and the people are very kind."
