The important duties of Australian organisar in connection with the visit in 1914 of a large body of distinguished British scientists has been allocated to a deputation of members of the British Association for the Advancement of Science and M. A. C. Rivett, of the Melbourne University. He is now in Adelaide getting in touch with local projects for the benefit of the Association and the progress of scientific work in this part of the world, and therefore no effort should be spared to make the visit a success. Rivett will be the chairman of the meeting. For several months arrangements have been in progress in the countryside, and it is expected that the meeting will be a success. Dr. A. C. D. Rivett, of the Melbourne University and his deputy, will be present at the Great Binghamham meeting of the Association, where he will take charge of the arrangements. The meeting will be held on June 11 and 12 in Melbourne.

"I have given up 12 months' leave of absence from the Melbourne University in order to do this important work," he remarked. The Commonwealth Government will defray the cost of the meeting. The Bannock International Association has in some sense connexion between the public and the people, and the people absolutely give the utmost they have. There are some special interests that the Association has set itself to discover and they are defraying the cost of Dr. Rivett's visit to Australia.

When seen on Tuesday Dr. J. G. B. Harper, of the Australian National University, who was the Victorian Rhodes Scholar of 1907, spoke enthusiastically of the forthcoming visit of the British scientists to Australia. The scientists are "biggest in Britain," and the cost of doing technical scientific work is about the same as in Australia. The scientists will be received at meetings, and they will be given the members of the Association a good time.

The Commonwealth Government has granted £1,000 for the expenses of the scientists and the meetings, and we are to expect that we shall be visited by at least 100 scientists and no doubt many more from the non-official tourist. The majority of the scientists are to come to Australia, and the society has arranged in conjunction with the Australian Commonwealth Government to defray the cost of the meeting. The scientists will be given a good time, and they will be given the members of the Association a good time.

On June 11 and 12, the meeting will be held in Melbourne, and the cost of the meeting will be defrayed by the Association. The scientists will be given a good time, and they will be given the members of the Association a good time.
