From the Antartic.

MESSAGE FROM DR. MAWSON.

Melbourne, March 19.

The State Governor has received the following telegram from the leader of the Antarctic expedition, and has been pleased to transmit it to the Premier of M.R. and B.O.:

"By Professor
Dr. Mawson, March 19.

The Antarctic expedition is now well advanced, and all is going well. The weather has been good, and the work is proceeding smoothly. The team is in good health, and we are confident of success. The expedition is expected to return in the autumn."

The Aurora.

Hobart, March 19.

Captain Davis, the leader of the Aurora, has received numerous messages from the various expedition leaders, expressing satisfaction with the work done, and congratulating them on their success. The expedition is well organized, and the results are expected to be of great scientific value.

Memorial Scholarships.

An excellent opportunity for young men and women is offered by the establishment of the Memorial Scholarships, named in honor of the late Sir Ernest Shackleton. The scholarships are open to students in any field of study, and are intended to support deserving students who wish to pursue their education further. The scholarships are valued at $1,000 per year, and are renewable for up to three years. Applications are now being accepted, and the closing date is June 1st.

The MAWSON EXPEDITION.

Everyone will regret that through stress of circumstances the University has had to cancel the Magnetic Expedition which was to have taken place this autumn. The party was to have been composed of some of the best students in the University, and their absence will be a great loss to the institution. The party was to have been commanded by Dr. Mawson, who is one of the most eminent scientists in the world. The expedition was to have been equipped with the latest instruments, and was to have set sail for Antarctica on the Aurora, captained by Captain Davis. The expedition was to have lasted for six months, and was to have made a thorough survey of the Antarctic region, with the object of discovering new lands and adding to our knowledge of the antarctic regions.
