A PROFESSIONAL ABROAD

INTERESTING TRAVELS.

Professor Danley Naylor, of the Adelaide University, who has returned from an absence of six months in the United States, was interviewed by a reporter on Wednesday, when he was speaking of his views concerning his travels. "I was accompanied by my wife and daughter," he said, "and we visited some of the most interesting places in the States. We traveled by rail and ship, and were able to see much of the country."

ANTARCTIC TRAGEDIES

MESSAGE FROM DR. MAWSON.

THE T inscientific progress made in the exploration of the Antarctic region has been remarkable. The recent expeditions have made many important discoveries, and have added greatly to our knowledge of this mysterious continent.

A LONELY JOURNEY.

A wireless message was received by Professor David yesterday from Dr. Mawson, on the Ross Island. The message reads as follows:

Dr. Mawson has stated that the Aurora, which was the first ship to reach the Ross Island, has been delayed by bad weather. The expedition is expected to arrive in the next few days. The scientists on board are conducting important investigations, and are expected to make many new discoveries.

WHERE THE DISASTER OCCURRED

STATEMENT BY PROFESSOR DR. MAWSON.

Dr. Mawson said that the tragedy occurred on the Scott Expedition, which was the first to reach the South Pole. The expedition was led by Captain Scott, who was accompanied by a team of experienced scientists.

The Aurora, which was the first ship to reach the Ross Island, has been delayed by bad weather. The expedition is expected to arrive in the next few days. The scientists on board are conducting important investigations, and are expected to make many new discoveries.

Six men were lost on the ice. The bodies were found frozen in their tents, and were identified by their clothing. The cause of the disaster is believed to be the extreme cold, which caused the men to succumb to hypothermia.

Dr. Mawson also said that the loss of life was a tragic reminder of the dangers that face all explorers in the Antarctic region. He called for increased safety precautions to be taken in future expeditions.

The Aurora is now making its way back to the Ross Island, and will arrive in a few days. The expedition is expected to make many new discoveries, and is expected to add greatly to our knowledge of this mysterious continent.

The story of the disaster has shocked the world, and has once again highlighted the dangers that face all explorers in the Antarctic region. It is hoped that the lessons learned from this tragedy will be applied in future expeditions, and will help to prevent similar disasters from occurring in the future.
