Ballarat School of Mines. I spent a couple of years there, delightful years they were, and passed on to Ormond College, Melbourne, where I majored on similar duties. To gain further knowledge and experience for a year's travel studying chiefly at the University of Sydney, and on my return was appointed lector of geology at the University of Melbourne. Shortly after that Professor Lyle took me into his department, and from there I came to Adelaide to take up Professor Bragg's work when he left to go to the University of Leeds. I was afterwards appointed permanent to the position of Physic Professor.

To read it as it stands, Professor Grant's a bit off the mark; his achievements were not gained without certain characteristic remitting study, and putting before all else the work. Long and loose limbed, he is a first-rate idea of what the heart of man and the heart of the heart is. He is, too, conspicuous in a domain in which he has established his personal charm. The Adelaide University is fortunate indeed, in its choice of professors on the sides of personal worth as well as on the side of professional erudition.
