News from Adelie Land.

The following is an extract from a letter from Dr. Douglas Mawson to a friend dated from Adelie Land, January 28.

"We are in to-day and arrived at our new home on Commonwealth Bay, and we are safely established. We have arrived here very comfortably, and we anticipate achieving a great scientific harvest of preliminary results. We have brought with us a variety of scientific equipment, and we shall be able to conduct our research work in the most comfortable and efficient manner possible.

Writing on board the Aurora on January 28, Mr. Frank Wild gives an interesting account of the expedition. We had a bad start on December 5th, when we left the ship, and had to face the elements of the Southern Ocean. We were very cold on the way, but we managed to arrive at Macquarie Island, where we found a small group of men working under the guidance of Captain Oates. We arrived at Macquarie Island early on Christmas Day, and were welcomed by the Endeavour, which had arrived on the 17th of December. We had a very pleasant time on the island, and the weather was very mild. We were very happy to be able to enjoy the facilities on the island.

The Aurora is now proceeding to the Ross Barrier, and we are looking forward to the exciting scientific work that we will be able to conduct on the Barrier.

The weather has been very uncertain, and we have had to be very careful in our planning. We have been very fortunate to have had such mild weather.

We have been very happy to be able to conduct our research work in such comfortable conditions. We are looking forward to the exciting scientific work that we will be able to conduct on the Barrier.

Goodbye to Mawson.

In the afternoon of the 19th there was a little snowstorm, and after tea we had to make a little shelter. At 8 p.m. we went to bed and were in a good way to get some rest. We have been very comfortable in our new quarters. At 3 a.m. we were in bed, and had a good night's rest. We have been very comfortable in our new quarters.

We have been very fortunate to have had such mild weather. We are looking forward to the exciting scientific work that we will be able to conduct on the Barrier.
