regions. Macquarie Island had now been reached. The expedition would be based there for the winter. The station would be kept there at all costs for a year. Meteorological records and scores of meteorological instruments were brought up from the mainland. They were to be settled by wireless to the headquarters of the Commonwealth Scientific and Industrial Research Organization in Melbourne. All the scientific work of the expedition would be centralized at Macquarie Island, and there was to be a large amount of information on the bird life of the south polar waters. The expedition was to be led by Dr. Leith, who was the most experienced and capable scientist on the trip.

The expedition was to be divided into two groups: a scientific group led by Dr. Leith and a party of men under the leadership of Captain Davis. With a foresight which all those who had been on the previous expedition, the scientific party had already left for the south polar region. The base party had also left, and the first food in the expedition was already on its way to the base party. It was almost sure to come upon a group of birds in the arc of about 50 miles, and it was decided that the scientific party would not go any further until that group was reached.

Imprisoned in an Ice Cave

So awful were the weather conditions in the Arctic that Dr. Leith, who was with the scientific party, was imprisoned in an ice cave. He was cut off from all communication with the outside world, and for days he was forced to live in the cave. The men on the scientific party, however, were able to cut a path through the ice and reach the scientific party. They were able to bring Dr. Leith back to the base party, and he was able to continue his work.

The Waverley's Arrival

The Waverley, a small whaleboat, had been sent to search for the Antarctic men. It was a small but sturdy boat, and it was able to make its way through the ice. The men on the boat were able to bring back Dr. Leith and the scientific party to the base party. It was a relief to have the men back, and the scientific party was able to continue its work.

The Main Fact

The main fact was that the expedition had been a success. The scientific party had made many important discoveries, and the base party had been able to survive the harsh winter conditions. The expedition had been a great success, and it had laid the foundation for future expeditions to the south polar region.

The Waverley had returned to Australia, and the men on the expedition were looking forward to their return home. They were tired and exhausted, but they were also proud of what they had achieved. The expedition had been a great success, and it had laid the foundation for future expeditions to the south polar region.
