DENTAL STUDENTS AND EXAMINATIONS.

From "Undergrad"—As a dental student, I recently attended the dental profession. I should like to know what the qualifications for this profession are. I have been able to obtain information from various sources, including the British Dental Association and the American Dental Association. In general, there are two main qualifications: a dental degree and passing an examination. These qualifications are necessary for those who wish to practice dentistry. However, there are also other factors to consider, such as the availability of dental equipment and the need for a dental assistant. In view of these factors, I believe that the dental profession is a highly demanding and rewarding career. I should like to congratulate all the dental students who have achieved this qualification. The Adelaide Advertiser, 17 Oct. 18.

DENTAL STUDENTS AND EXAMINATIONS.

From "Graduate"—I received a letter from "Undergrad" expressing his interest in the dental profession. I am pleased to hear that he is considering a career in dentistry. I should like to point out that the dental profession is a highly specialized field, requiring a great deal of knowledge and skill. However, it is a rewarding career that offers a great deal of personal satisfaction. I should like to wish "Undergrad" every success in his endeavors. The Adelaide Advertiser, 19 Oct. 18.

THE EXAMINATION SEASON.

The University junior, senior, and higher public examinations, also the junior and senior examinations of the Exhibition Building, will be held on the 24th of November. In exception to the usual number of candidates, there will be a smaller number this year. The University has arranged for the examination to be held in the Exhibition Building, which will be open to all who wish to take part. The Adelaide Advertiser, 19 Oct. 18.

NEW COURSES OF STUDY.

Referring to the endowment of a chair of civil engineering in the University of Adelaide, for which £2,000 per annum was provided by the government, Mr. L. B. Smith, E.E., is the chairman of the committee of the department of civil engineering. The endowment has been allocated in the University of Adelaide, and the Adelaide University has been selected as the institution to which the endowment shall be applied. The Adelaide Advertiser, 25 Oct. 18.
UNIVERSITY OF ADELAIDE.

A meeting of the council of the University was held at the Pro-Chancellor's, Rev. Prof. F. D. Montague, on the evening of Thursday last. Discussion was had of the question of the retirement of Sir T. A. S. M. Glenny, who will vacate his chair at the end of the present academic year. A committee of three, Messrs. W. H. Bentley, E. W. Hinshelwood, and E. J. Heane, was appointed to consider this question and report to the council at its next meeting.

UNIVERSITY LECTURE CONCERT.

At the Broken Hill Hall last night a lecture concert was given under the auspices of the Music Society. The programme was arranged with a good attendance, and two works of great interest were given, viz., "The Hymn," by Handel, and "The Messiah," by Mozart. The string quartet, compiled of Messrs. Scott, Mowbray, and Williams, and a young lady, Miss Eliza Marton, were of great excellence. The quartet, as well as the pianoforte solo, proved most acceptable. After the concert, a Students' Ball was given at the University Club, where dancing was carried on until the early hours of the morning.

DENTAL STUDENTS, AND EXAMINATIONS.

From "A Graduate"—Perhaps a hint should be given to dental students that they should not neglect the examination for registration in order to prepare themselves for the examinations. It is only to their advantage to study thoroughly and to make the required preparation. A large number of students have already taken the examination, and it is to be hoped that a number of them will pass the examinations. The Dental Board has been very active in the examination of dental students, and it is to be hoped that the students will take advantage of the opportunity and take the examinations.
SIR EDWARD STILLING'S VIEWS

Sir George Newman, M.D., F.R.C.P. (Chief Medical Officer of the Board of Health in England) has issued a memorandum, entitled "Some Notes on Medical Education in England," a report on the educational system in the Melbourne Age. The eminent physician and surgeon, after reviewing the defects of the medical profession and the medical students, and declaring that the removal of these defects is a matter of importance, proposed that medical curricula should be revised. He declared that the defects of the medical profession, as well as the medical education in England, were due to a lack of systematic training. He stated that the medical profession, as well as the medical education, was in great need of reform. He emphasized that the medical profession, as well as the medical education, was in great need of reform. He emphasized that the medical profession, as well as the medical education, was in great need of reform. He emphasized that the medical profession, as well as the medical education, was in great need of reform.

CONSERVATORIUM LECTURE CONCERT.

The fifth of the five series of lecture concerts in connection with the Elder Conservatorium was given at the Board of Trade building on Monday evening. The Chancellor of the University was present, accompanied by Miss Murray. The first number, Mozart's Quartet in B flat (known as the 'Hunting quartet') performed by Miss Constance Welled (first violin), Miss Kevan Murray (second violin), Miss Whittington (viola), and Miss Whittington (violoncello). Professor Ennis introduced the quartet as one of his students. During the lecture, the lecturer took the bears through the writing, so as to make the music intelligible and with full enjoyment from a complete rendering. The quartet in A for piano, flute and strings, Op. 25 (Brahms), was given by Professor Ennis and other well-known artists. The position of Brahms was explained. It was Schumann who, at the cost of Brahms, exclaimed, 'Hate off, gentlemen, to grains.' Some controversy, as is given in a newspaper, had given the work up, but it was increased by the work of Brahms. It was a great reputation, but Brahms had done so successfully. The quartet was in a simple state. There was an interesting example of the use of the violin, which was carried on a phase of the subject, referring to the connection with Beethoven's 'ana' in the previous lecture. A characteristic two-note effect was used combined with a somewhat long drawn out, more moody, and more musical phrases to give the music in sections. There was a line and there was a phrase, but it added much to the enjoyment of the audience in illustrating the explanation of the building up of the music. It brought out its full beauty and meaning and the appliance at the conclusion was very fine. There is only one more of these lecture concerts, but it is to be hoped another series will be arranged at a distant date.

Professor Ennis has brought out the characteristics of the different composers with great success.
