University Council was wholly in favour of the scheme above, but it was possible also the area of the Oval could be made into residential purposes, but it could be handed over to the University for all time, and allow even for the establishment of one or two residential colleges, upon the condition that any 100 acres in extent could be regarded as adequate for their purposes, and that any proposals for development should be regarded as excessive.

The report is unanimous and bears the signatures of Mr. Simcox (Chancellor), the Hon. J. B. Rankin, and Messrs. Smee, H. P. Cooke, and Laifer. The commission recommended that a Government House could fulfil all its functions, and the land used for purposes, and that the land of the old Exhibition Buildings, and storage were unsuitable and unsuitable, and recommended that they be removed in whole or in part. It was stated that the pleas of the Beaumont might be to advantage of both sides.

The Recommendations:

The main recommendations of the commission are as follows:

That when suitable arrangements can be made for the Military Parade Grounds, lands occupied by the University, and for the police buildings, the site of the old Exhibition Buildings, and storage, the Park would provide a better alternative for an important State or civic building, with public gardens, and the provision of the walls forming the street and road boundaries of Government House domain, which were unsatisfactory and unsuitable, and recommended that the land be removed in whole or in part.

In the case of the Jubilee Oval, the land necessary for railway purposes should be so allotted, and the land near by which the Police Buildings and compounds, and buildings used for military purposes, shall be removed as far as suitable for public recreation, and the Police Buildings and compounds, and buildings used for military purposes, shall be removed as far as suitable for public recreation, and the Police Buildings and compounds, and buildings used for military purposes, shall be removed as far as suitable for public recreation.

The Jubilee Oval should be retained for present purposes, and the Jubilee Exhibition Buildings be made into an area of an adequate kind for the accommodation of the ground, and for the town, the machine hall, and carriage."
THE BOTANIC GARDEN

To the Editor,

The late Mr. R. G. McKail, the President of the University, has consented to the use of the Botanic Garden for the purpose of agricultural instruction. The area of the grounds has been increased, and the Botanic Garden is now one of the largest in the country. The Board of Directors has decided to devote the garden to the cultivation of plants suitable for the climate of North Adelaide. The Board is grateful to Mr. McKail for his generous assistance in this matter.

THOS. H. BROOKER, President.

THE LATE SERGEANT R. G. MCKAIL

Mrs. E. L. McKail, of North Adelaide, has been notified that her son, Sergeant R. G. McKail, was killed in action in France on August 6. Sergeant McKail was a keen sportsman and a member of the North Adelaide Football Club. The Board of Directors of the University has decided to erect a statue in his memory.

THOS. H. BROOKER, President.
TUTORIAL CLASSES.

Professor Meredith Atkinson, Director of Tutorial Classes for the University of Sydney, went to Broken Hill on Wednesday. He considers that Broken Hill is now an integral part of the University, and that the work of the University is now being carried on at Broken Hill in every way. The work of the University is being carried on at Broken Hill, and that the work of the University is now being carried on at Broken Hill in every way. Ahowsheen          11-6-16

Lieutenant A. S. Blackburn, who has been awarded the Victoria Cross, is well known in South Australia. He is a son of a海for years labor. He began his education at the University of Adelaide and graduated in law at the University. He served his articles with Messrs. F. W. Black and Co., solicitors, of King William Street.

Chemistry Research Department.

The Chemistry Research Department established by the Government has already proved itself of great value. The government has undertaken to purchase a substance heretofore unknown to science. This substance, after the so-called urine test, really the urine from the economic point of view, is not run to waste. The result of the tests has been most promising. At the last meeting of the Advisory Committee in connection with the Research Department, Professor B. Hendry (head of the department) submitted the results of his experiments. These showed that the substance was highly valuable and could be converted into a marketable product. The experiments conducted by Professors B. Hendry and C. P. Bendall on Monday, the results of which were the most satisfactory, showed great promise. Four samples have been submitted to the department for analysis, and a valuable commercial fat will be produced from this by-product. The production of this fat is estimated at £3000 per annum. The price for this fat is £15 per ton. The process for extracting the fat from the wool is simple, and the material is thrown away.
CAPTAIN BLACKBURN, V.C.

A MODEST, RETIRING YOUNG MAN.

The news published in 'The Advertiser' on Monday that Lieutenant—he is now Captain—A. S. Blackburn, an old St. Peter's College pupil, had been awarded the Victoria Cross for conspicuous bravery, received with the utmost pleasure, not only by his school and other friends, but by the public generally. Captain Blackburn is the first South Australian to win the distinction. Lieutenant Thursday, who was similarly honored a few months ago, was educated at Prince Alfred College, but he is a native of the South and is a son of the late Canon Blackburn of Woodville, who was one of the leading members of the Royal Society and a great authority on beetles. The news of the highest honor that could be won was described as a "modest, retiring man." He served his articles in the office of Mr. C. R. Hardy, solicitor, and was admitted to the bar on December 13. Mr. Barton Hardy, referring to Mr. Blackburn's achievement on Monday, said the young son was one of the first to enlist in South Australia. He was "enthusiastic about going, even to early in the war." Mr. Hardy said, "I was determined to go if he could, although we thought he had no chance of passing, but since he had graduated and had to go back, I don't think he ever did much in the way of athletics, but I do know he started in 1926 and had to go back in 1927. It was considered too delicate. However, he was accepted for service, and a few weeks after going into camp he began to show the good effects of the training. Later on he developed a splendid soldierly appearance and one would hardly have recognized him as the modest, unassuming, young man we had in our office. He went away with the 10th, and was at Gallipoli throughout the campaign. He said the opportunity of being promoted to lieutenant was one that he had been looking forward to for a long time. I believe he was promoted to lieutenant as a reward for his services, and as he was well known to us, he was described as the "brave young man." He married a lady from the east, and she was described as "brave young woman." The present has not been wounded or sick, and is said to be in the best of health.
