WHY GERMANY LOST THE WAR

THE IMPORTANCE OF FOOD

Professor T. Braddick Robertson, who succeeded his father, the late Sir W. T. Braddick, as chairman of the chair of physiology at the University of Adelaide, has a world-wide reputation as a physiologist and university teacher. He has been awarded the憎 unfurled in many foreign languages.

The importance of proteins in the war.

In the course of the year, I have been associated with many of the activities of the University, and have been called upon to speak on the action of the minute organisms and the great advances in the study of the problems of nutrition. It is upon this that the war is based.

Protein, which is the main element of the diet, has been much discussed recently in the press and in scientific circles. It is the foundation of the human body, and is essential for the growth and repair of tissues.

The diet of the German people is based on proteins, and it is this that has been the cause of their success in war.

Protein is a complex substance, consisting of nitrogen, carbon, hydrogen, and oxygen, and is the essential constituent of all living matter. It is the building material of the body, and is necessary for the growth and repair of tissues.

Protein is found in all plant and animal tissues, and is the chief source of energy for the body. It is the basis of all the organic matter in the body, and is the chief source of energy for the body.

Protein is the chief source of energy for the body, and is the basis of all the organic matter in the body. It is the chief source of energy for the body, and is the basis of all the organic matter in the body.
