UNIVERSITY GRADUATES
ANNUAL MEETING OF ASSOCIATION.

The annual meeting of the Graduate's Association was held on Monday night in the assembly room of the University. The reception was presided over by Mr. D. H. Hodge, who, in the course of the evening, gave an address on "The Traditional Aspects of the Modern University." The meeting adjourned to meet again next Monday night, the refusal of the President to sign the minutes of the meeting being the cause of the adjournment. The President is expected to attend next Monday night.

MUSIC TEACHERS' CONFERENCE. From Edward Howard, the popular artiste in connection with the Adelaide University, we learn that he has been appointed to a position in the music department of the University. He will also give a recital of his own compositions at the University next week.

"MAN, A PARASITE." PHYSIOLOGY OF EVERYDAY LIFE.

Professor T. Bradley Robertson, a noted Australian physiologist, delivered a series of lectures on the physiology of everyday life in connection with the Adelaide University. The lectures were divided into three sections, the first of which dealt with "The Functions of the Nervous System," the second with "The Functions of the Endocrine System," and the third with "The Functions of the Muscular System." Professor Robertson is one of the leading authorities on the subject, and his lectures were well attended.

There were substances, he said, which were essential for life and which could not be obtained directly from food or water. These substances were known as "Essential Nutrients." He explained that the body could not function properly without these nutrients, and that their absence could result in serious illness or death. He also pointed out that some substances, such as vitamin C, could only be obtained from certain foods, and that a deficiency in these foods could lead to scurvy.

One of the most important findings of this new branch of science was that the human body was capable of producing many of the substances it needed. This was known as "Endogenous Synthesis," and it was a key factor in the development of modern medicine.

In conclusion, Professor Robertson emphasized the importance of a balanced diet and the need for regular exercise. He also stressed the importance of regular medical check-ups and the importance of seeking medical advice when necessary.

The lectures were well received by the audience, and Professor Robertson was scheduled to continue his lectures next week.
