**DISEASE AND MATERIALISM.**

A COUNTER-CRITICISM.

(By J. T. Hackett.)

"A Believer in Evolution" raises many important questions that the sceptic may deal with briefly.

I see no need to prove that the origin of species is not an event, but that it may be explained by an evolutionary process. The theory of evolution is not a new discovery, but it is a logical conclusion from the facts of the spontaneous generation of species.

I believe that the origin of species is not an event, but that it is a process that has been going on for millions of years. The theory of evolution is not a new discovery, but it is a logical conclusion from the facts of the spontaneous generation of species.

I believe that the origin of species is not an event, but that it is a process that has been going on for millions of years. The theory of evolution is not a new discovery, but it is a logical conclusion from the facts of the spontaneous generation of species.
