"COMMUNITY DISEASES."

Interesting Sidelong at Vital Facts.

In the second of a series of University expositions held under the Prince of Wales Theatre at the University on Tuesday evening, Professor J. I. L. Edmunds, who was asked what he might be called, immediately replied: "A medical man." During the course of his exposition, which is the second in the series organized by the Public Health Association, Professor Edmunds traced the history of community diseases. He described the importance of community diseases and their maintenance in dependence upon the community as a whole. Professor Edmunds explained the vitality of community diseases, which can be transmitted from one individual to another, and the importance of the community in the maintenance of these diseases. He also discussed the prevention and control of community diseases, emphasizing the role of public health measures and the importance of community involvement in maintaining healthy conditions. The exposition was concluded with a discussion on the current state of community diseases and the challenges faced by public health officials in addressing these issues.
