DISEASE, AND MATERIALISM.

By J. T. Hackett.

Unfortunately missed Professor C., as I understood his lecture on the nature of diseases and the conditions attendant on them. His lecture was, however, well received by the audience, and he gave a clear and concise account of the subject.

It is generally agreed that diseases are caused by external agents, and that the body is the most important factor in their production. The body is the seat of all the functions of the mind, and in the production of diseases the body is the most important factor. The body is the seat of all the functions of the mind, and in the production of diseases the body is the most important factor.

The body is the seat of all the functions of the mind, and in the production of diseases the body is the most important factor. The body is the seat of all the functions of the mind, and in the production of diseases the body is the most important factor.

The body is the seat of all the functions of the mind, and in the production of diseases the body is the most important factor.
