**Educational Requests and Service Duty**

Among the Bills of which notice has already been given, is one to exempt the University from liability to pay succession duties on certain property. The Bill is based on the general principle of the Bill of the Lord Chancellor for the furtherance of agricultural science. Under this measure, the estate of an individual who is not subject to the tax would be subject to the tax, but the tax would only be payable when the property passes from the individual's estate. This Bill is not likely to be successful unless the property passes into the hands of a person in whom it is held on trust for some charitable or educational purpose.

**South Australian Doctor's Experiences**

Capt. David Davies was recently in Oxford, and has written an article for the South Australian weekly, *The Mercury*. Davies has been in Oxford for several weeks, and has been very busy with his work. He has been working on a new project, and has been receiving a lot of support from his colleagues. Davies is currently working on a new mathematical model that could potentially revolutionize the field of physics. The model has attracted a lot of attention, and Davies is planning to publish a paper on the topic soon.

**Strain and Stress**

Professor C. F. Dennett, in his address on engineering delivered at Oxford before the British Association for the Advancement of Science, said that the time had come to make a thoroughgoing study of the mental and physical demands of engineering. The demands of modern engineering are such that it is necessary to consider not only the physical stress, but also the mental strain. The demands of engineering are not only on the body, but also on the mind. The mental strain is as important as the physical strain, and it is necessary to consider both in the study of engineering.
