VALUE OF INSULIN.

A Wonderful Recovery.

LONDON, August 28.

Jacky Keightley, a child of five years, living at Johannesburg, South Africa, was today pronounced cured of diabetes, a complaint generally considered as a death sen-

tence, and the medical experts who have attended the case are convinced that the child will live to be an old man.

Dr. Ramsey Smith, physician to the Children's Hospital, said today that the little girl had been treated with the new drug insulin, and that she had been free from symptoms of the disease for the last nine months.

Insulin is a substance that is produced by the pancreas and is essential for the metabolism of carbohydrates. It is used to treat diabetes, which is a condition where the body cannot properly use sugar from food. Insulin is administered through injections and can be given by a doctor or a healthcare professional.

DISCOVERER'S LIFE INSURANCE.

TORONTO, August 28.

The life of Dr. Banting, the discoverer of the insulin treatment for diabetes, has been insured for $2,000,000. It is understood that the policy was guaranteed by the Rockefeller Foundation. Dr. Banting has been hospitalised with a severe case of inflammation of the lungs, and is among the ten men carrying the largest life insurances in the world.

Dr. H. H. Round has been invited to become a member of the editorial and advisory board of the newly-formed monthly magazine, "Living Science," which will be issued by the British Medical Association.

The members of the debating teams from Melbourne and Brisbane Universities in Australia will leave for London on Wednesday, where they will compete in a series of debates on scientific topics.

Mr. Arthur William Pitt, M.A., has been appointed an inspector of schools.
