CARE OF THE TEETH.

The New Dental Hospital.

Up-to-date Equipment.

The objects of the new Dental Hospital are—to provide dentistry for persons not in a position to pay the full cost of care and thus help in the establishment of the dental care of the poor. The hospital will be located in the new Dental College in the University of Victoria. The building will be completed in 1923. The hospital will be open to the public on Saturdays and afternoons.

The Dental Society in the first place, was created by the University authorities to ensure the highest standards of dental care for the poor. The society will be staffed by the best qualified dentists in the province. The society will be supported by the University and will be governed by a board of directors, including representatives from the medical and dental professions.

The society will provide dental care for all, regardless of income, and will offer a range of services, including preventive care, restorative care, and emergency dental care.

The dental students will be trained in the new dental hospital, and will be supervised by experienced dentists.

The society will be funded through a combination of government funding, private donations, and fees charged to patients. The society will provide services at a cost that is affordable to all, and will offer sliding scale fees based on income.
