THE GRADUATES' ASSOCIATION.

FORMING OF A CLUB.

The 33rd annual meeting of the graduates' Association of the University of Sydney was held in the Walers Theatre, University Building, on the evening of Thursday, Professor Isherwood Thompson was the Vice-Chancellor (Professor Mitchell) was elected President.

The President reported on the events of the year in which the Association had been interested. The Annual General Meeting had been a success. The new officers of the Association had been elected, and the election of the new president was announced. The Association had had several meetings during the year, and had discussed various matters of importance to the members. The Association had also been active in supporting various charitable and educational causes.

THE MEDICAL COURSE

MEDICAL COURSE.

A LENGTHENING RECOMMENDED.

The vice-chancellor of the University of Sydney, Dr. M. Powell, has made a special tour of the medical schools of the Commonwealth and has recommended that the course of medical study be lengthened by one year. The present course is three years in duration, but Dr. Powell recommends that it be extended to four years. The reason for this is that the present course is not sufficient to give the student a thorough understanding of the subject.

THE DANGER OF FLIES.

AN INSTRUCTIVE ADDRESS.

The danger of flies is a subject that is being given much attention at present. The problem of controlling insects is one that is becoming more and more pressing, and the control of flies is a part of this larger problem. A recent address on the subject of insect control was given by Dr. M. Powell, who spoke on the subject of insects and their control. The address was given at the Lister Institute, in Sydney, and was attended by a large number of members of the Association.

THE DANGER OF FLIES.

Work of Investigation.

The work of investigation is being carried on, and progress is being made. The reports of the various workers are being prepared and will be submitted to the Association. The work is being done under the direction of Dr. M. Powell, who is in charge of the investigation.

Fugitive.

The students are being encouraged to do more research work, and the results of their work will be presented at the next meeting of the Association.

Methods of Control.

The most important methods of control are the use of insecticides, the destruction of the insect pests, and the use of natural enemies of the insects. The use of insecticides is the most effective method, and is often used in combination with other methods. The destruction of the insect pests is also important, and is often used in connection with other methods. The use of natural enemies of the insects is also important, and is often used in combination with other methods.

THE FLY MENACE.

At a meeting of the Public Health Association, in the Lister Institute, the following address was delivered by Professor M. Powell:

"The control of insects is a problem that is becoming more and more pressing. The control of flies is a part of this larger problem. The control of flies is a problem that is becoming more and more pressing, and the control of flies is a part of this larger problem. The control of flies is a problem that is becoming more and more pressing, and the control of flies is a part of this larger problem."
