ZOPOLOGICAL PROBLEMS.

PROFESSOR H. JOHNSTON'S ADDRESS.

At the University on Tuesday night, Professor H. Johnston delivered, to a large audience, the first of a series of three illustrated lectures entitled "Zoological Problems." These lectures were given by the Adelaide University's professor of pathology, Dr. W. M. Hurst, B.Sc., who is also a student in chemistry.

At the Cambridge University last week the degree of Doctor of Philosophy was conferred upon Mr. W. M. Hurst, B.Sc., a graduate of the Adelaide University. Dr. Hurst received his early education at Houghton, and proceeded from there to Adelaide High School. At the end of 1915 he obtained honours in the higher public examination, and gained a Government scholarship for the study of chemistry. He did not continue his studies in mathematics and chemistry, but secured his B.Sc. degree in 1918, and obtained honours in chemistry the following year.

Dr. W. M. Hurst, B.Sc.

Dr. Hurst delivered an address on the subject of zoological problems. He pointed out that the study of zoological problems is an important field of study, and that it is essential to the understanding of the natural world. He emphasized the need for the study of zoological problems in order to protect the natural environment and to ensure the survival of species.

The lecture was well received by the audience, and was followed by a lively discussion. The lecture was repeated on Wednesday night, and was again well attended.

The lecture was repeated on Thursday night, and was again well attended. The audience was impressed by the lecturer's knowledge and expertise, and the lecture was considered to be a valuable contribution to the study of zoological problems.
