THE BAR’S ATTRACTION

CROWDING THE LEGAL PROFESSION.

INFLUX OF STUDENTS.

So many young students are now entering the Law, it is as if there is a prospect of the legal profession becoming overcrowded, for only 49 students were studying law this year. This is an established profession with its duties and responsibilities.

Such cases have occurred in England, so frequently in fact, that the idea of the legal fraternity is now looked upon as one of the most serious and important matters of the day. The ranks of the profession in Adelaide have been filled for three years during the last four years. In 1911 the University of Adelaide had only 25 students, but this year it has increased to 41. Thus a new and developing branch of the legal profession is being established.

The total number during those five years is 150, and the University of Adelaide has a large number. The feeling is that the profession is an overcrowded one, but that it may be overcrowded.

Commenting upon the position one of the members of the profession has a word to say. He is an old friend of the University and the Adelaide Bar. Everyone looks upon it nowadays as an important institution, and rightfully so. His remarks are taken by everyone who reads them.

THE INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.

THIS is one of the organizations for the promotion of world friendship. At present its members are university women drawn from 17 nations. The aim of the Federation is to promote friendship between the women of different nations, and through this to further their interest in the study of the social and cultural life of the world, and thereby to further their interest in the progress of the world.

The Federation is a most useful organization, and one which has done much to promote the welfare of women in different parts of the world. It is a body of women who are interested in the welfare of women in other parts of the world, and who are willing to do all in their power to promote the welfare of women in other parts of the world.

GRAVITY OVER OCEANS.

A FASCINATING INVESTIGATION.

A lecture on "The Investigation of Gravity Over Oceans," which proved of exceptional interest to the audience, was delivered by Professor Geoffrey Duffield, of the University of Reading, England, before the Graduate Association of the University of Adelaide on Tuesday evening.

In this field of research, Professor Duffield, who is well known for his distinguished services in the field of oceanography, is a leading authority. He has been engaged for a number of years in the study of ocean currents and the influence of the oceans on the climate of the world. It is his intention to continue his investigations, with the assistance of Mr. M. A. L. Duffield, on the forthcoming voyage to England, and for which purpose he has been under the care of the British Association for the Advancement of Science for several months past. The lecture was preceded by Professor Brownlow.

Professor Duffield explained that the investigation in which he was engaged was to determine the influence of the oceans on the climate of the world. He had been working on the subject for several years, and had made a number of important discoveries. The investigation had been carried out in collaboration with Mr. M. A. L. Duffield, who had assisted him in many of the experiments. They had been working in the Indian Ocean, and had obtained valuable results. The investigation had been extended to the Pacific Ocean, and had been carried out under the direction of Professor G. F. Duffield, of the University of Reading, England.

At the conclusion of the lecture Professor Duffield said it had been a great privilege to have been able to work on this important subject. He had been working on it for many years, and had made a number of important discoveries. The investigation had been extended to the Pacific Ocean, and had been carried out under the direction of Professor G. F. Duffield, of the University of Reading, England. The results obtained had been of great importance, and had shown the influence of the oceans on the climate of the world. They had been working in the Indian Ocean, and had obtained valuable results. The investigation had been extended to the Pacific Ocean, and had been carried out under the direction of Professor G. F. Duffield, of the University of Reading, England.

The lecture was followed by a short address by Professor Brownlow, who expressed his appreciation of the lecture and the work of Professor Duffield. He said that the results obtained had been of great importance, and had shown the influence of the oceans on the climate of the world. They had been working in the Indian Ocean, and had obtained valuable results. The investigation had been extended to the Pacific Ocean, and had been carried out under the direction of Professor G. F. Duffield, of the University of Reading, England.

Questions of Grammar.

Another in your line of work. I was, of course, a first-rate student in English grammar. By the way, do you know that I am also an expert in the theory of gravity? When I was a child, I was always fascinated by the way in which the oceans affect the weather. I used to spend hours studying the maps of the world, and trying to understand the influence of the oceans on the climate of the world.

There are, I am sure, many who are interested in the theory of gravity, and who would like to know more about it. I am always willing to share my knowledge with anyone who is interested. I am sure that there are many who would like to learn more about the influence of the oceans on the climate of the world. I am always willing to share my knowledge with anyone who is interested.
