

## TEACHERS' NEW TRAINING COLLEGE.

The Commissioner of Public Works (Hon. G. F. Jenkins) states, in connection with the proposed new training college for teachers, that it is expected that tenders will be called by the Architect-in-Chief's Department during next month for the erection of the building. The structure will be located on a specially dedicated site in Kintore avenue. It will occupy a commanding position on the rise overlooking the Parade Ground and the Aiel-ide Club's bowling green, and the area will be 142 feet by 117 feet. The building will be of two stories, and be designed on a quadrangular plan, and be collegiate in type. There will be an effective colour scheme—blue stone base, white cemented walls, and tiled roof. The accommodation will provide for all necessary office and staff rooms, large and small classrooms, nature study laboratory, library, teachers' rooms, and rooms of generous size for male and female students. A striking feature of the design will be the assembly hall, the internal dimensions of which will be 65 feet by 36 feet. The structure generally will be replete with modern teaching equipment, and will be heated by a hot water service.
