SCIENCE CONGRESS OPENED IN ADELAIDE

Civic Reception Tendered to Delegates

Sir John Monash on Scientific Research

Without scientific research there could be no applied science, said Sir John Monash, president of the Australian Association for the Advancement of Science, and he expressed the hope that as many as possible of the distinguished scientists who were present would take part in the congress. The scientific community was deeply conscious of the importance of the work of scientists, and he hoped that the congress would not be an occasion for mere social gatherings, but that it would be an opportunity for the advancement of science.

The Lord Mayor of Adelaide said that Adelaide was proud to welcome the congress, which was the first scientific congress held in the southern hemisphere. The city was fortunate in having such a congress as the first, and he hoped that it would be the last, and that the city would be able to host more congresses in the future.

MEETING OF THE COUNCIL

NEW METHODS OF ORGANISATION

An important meeting of the Council of the Australian Association for the Advancement of Science was held in the Prime of Wales Theatre, yesterday, for the purpose of discussing the organisation and co-operation among scientific societies.

A general council meeting of the Australian Association for the Advancement of Science was held in the Prime of Wales Theatre, yesterday, for the purpose of discussing the organisation and co-operation among scientific societies.

The chairman opened the meeting by expressing the hope that the congress would be successful and that it would be a great step forward in the scientific work of the country.

Mr. A. G. Gibbs, M.L.A.

Mr. A. G. Gibbs, M.L.A., said that he was pleased to see that the congress was being held in Adelaide, and that it would be a great step forward in the scientific work of the country.
