POWER DEVELOPMENT IN AUSTRALIA.

ENTHRALLING LECTURE BY SIR JOHN MONASH.

In a presidential address of intense interest, delivered to the assembled members of the Australian Association for the Advancement of Science at the Adelaide Town Hall on Monday night, Sir John Monash, Chairman of the Anglo-Indian Oil Company, or Victorian Electricity Department, made the following point on the subject of "Power development." The audience was deeply impressed by the eloquence and authority of his address, and the subject was of great interest and importance to the industry.

The topic of the lecture was the development of power in Australia, and Sir John Monash emphasized the importance of power development in the future of the country. He discussed the use of various sources of power, including hydro-electric and thermal power, and the advantages and disadvantages of each. He also spoke of the need for new developments in the field of power generation and transmission.

The audience was particularly interested in Sir John Monash's ideas on the use of power in industry, and he discussed the potential for power to play a significant role in the growth of the economy. He also spoke of the need for new industries to be developed in order to utilize the power that was being generated.

The lecture was well received by the audience, and there was much discussion and debate after the presentation. Many of the attendees were enthusiastic about the possibilities for power development in Australia, and the lecture was seen as a major contribution to the discussion on the subject.

SIR JOHN MONASH

who last night was installed as President of the South Australian branch of the Australian Association for the Advancement of Science.
