REVERSAL TO BARBARISM.

The Register.  
Monday, August 25, 1924.

SCIENTIFIC UNITY.

Science teaches us, that, fundamentally, the distinctions between ships and shoes and sealing wax are more apparent than real. The favored, the great, the living authority on the material properties of elements, again declared most positive that it was possible to stop the weather, but, as everyone knows, the wind was not stopped. Even the eagle has been seen to fly as high as a rose, but that is not because of its beauty. And so it is with the atom. When in the presence of a scientist, we feel the weight of knowledge, but it is not the knowledge of the atom, but the knowledge of the scientist. The atom is the unit of matter, but the scientist is the unit of thought. The scientist, therefore, is the living authority on the material properties of elements.

Effects of Alcohol.

Regarding alcohol, it had been shown that it is capable of changing the temperature of the body, but it had not been shown that it is capable of changing the temperature of the mind. Good judges are only as good as their temperaments, and temperaments are only as good as their habits.

PUBLIC HEALTH.

The Health Association is a body recently organized to study and discuss the problems of public health. It was formed to bring together the representatives of all branches of medicine, to discuss the problems of public health, and to take such measures as may be necessary to improve the health of the community.

Dr. F. H. Hoc.

On the other hand, the health of the community is closely connected with the health of the individual. The health of the individual is closely connected with the health of the family. The health of the family is closely connected with the health of the community. The health of the community is closely connected with the health of the nation. The health of the nation is closely connected with the health of the world.
