DOMINION SCIENCE SCHOLARSHIPS.

The Dominion Science Scholarships—these scholarships were established by the Dominion government in 1919 to assist students in obtaining higher education in scientific fields. The scholarships were awarded to students who demonstrated outstanding academic achievement and potential in the sciences. The scholarships covered tuition fees, living expenses, and travel costs for the students to attend universities in the United Kingdom or Canada.

The conference commenced at 10 a.m. in the Union Hall, the speeches being made by the Acting President, Sir George Murray, Chancellor of the University, and other distinguished guests. The conference was open to all members of the University, and guests were welcome.

The conference was divided into several sessions, each focusing on a different aspect of science education. The sessions included discussions on the role of science in society, the importance of science for national development, and the need for international cooperation in scientific research.

At the end of the conference, a declaration was signed by the delegates, committing them to working towards a more inclusive and equitable science education system. The declaration called for increased funding for science education, especially for underrepresented groups, and for the establishment of partnerships between universities and industries to promote innovation and economic development.

In conclusion, the conference was a successful event that brought together leading scientists and educators from around the world. The discussions and declarations made during the conference were expected to have a significant impact on the future of science education and research.
