MAN ON THE LAND.

WHEAT VARIETIES.

Characteristics Described.

Dr. A. E. V. Richardson, M.A.,
Director of the Wheat Research Station, South Australia.

Wheat has at last a great ally in the researches of Dr. Richardson, who has been busy for a long time preparing for the publication of a work on the characteristics of the various varieties of wheat that are grown in South Australia.

The wheat research station, which does so much to enhance the value of the wheat crop, has for some time been engaged in the cultivation of a large number of varieties, and has done much to make the best selection of seed available for the various purposes to which it is put. The result has been a large variety of seed, which can be safely grown in different parts of the state.

The new work is to be published as a monograph, and will be of great value to farmers and grain merchants. The book will be published in a series of parts, each containing information on one variety.

The book is to be published in a series of parts, each containing information on one variety. The first part will be devoted to the characteristics of the wheat varieties grown in the state, and will be followed by parts dealing with the various uses to which the wheat is put. The book will be of great value to farmers and grain merchants.
