ACROSS AUSTRALIA.  

Touring Near Alice Springs. 

Droves of "Rosella" Seen. 

By William Artesenon.  

ALICE SPRINGS, Tuesday.  

On Sunday last, a group of Melbourne University, took the place of Mr. Harry Dryden, who remained at Alice Springs. The group was formed by a number of men who drove some 800 miles west in the Hendy. They camped, and after the usual campfire stories, turned around and then drove through the bush singing and dancing. The group then turned north through the MacDonnell Ranges, and then turned back through the bush on the way back to the Hendy. They were accompanied by a group of Australian Aborigines, who were very friendly and helpful. 

Apart from the teaching, computer, and engineering positions it has not been found sufficiently recognised that the Aborigines of Australia are men and women equipped to some of the most important positions in society. The Aborigines are not only highly competent to fill positions of responsibility, but have also the ability to understand the nature of their own culture and traditions. They are also often found in positions, even though they should not be, to be highly competent to begin with. 

BRITISH SCIENCE GUILD. 

Research by Local Branch. 

In the field of natural history, the British Science Guild, the South Australian branch of the British Science Guild, is conducting research. A report of the work of the Committee is to be given at the meeting of the Guild, at a later date. 

At the annual meeting held on Wednesday, 31st July, Mr. H. Potter, the President, announced the following results. 

The scheme launched in 1923 for the publication of a series of natural history handbooks on the fauna and flora of the various states and territories of Australia has been carried out satisfactorily under the able direction of the Honorary Secretary, Mr. C. Wood Jones (chairman), Dr. B. H. Pilditch (vice-chairman), and Professor J. R. Cleland (secretary). In the report last year announced the following results: 

"The Flocks of South Australia, New South Wales, and the South Australian branch of the British Science Guild, has been carried out satisfactorily under the able direction of the Honorary Secretary, Mr. C. Wood Jones (chairman), Dr. B. H. Pilditch (vice-chairman), and Professor J. R. Cleland (secretary). In the report last year announced the following results: 

LAW STUDENTS' SOCIETY. 

A meeting of the Adelaide University Law Students' Society was held on the following day, attended by the following, who were appointed to the committee: 

Mr. C. E. Russell Booth. 

In the same meeting the President, Mr. C. E. Russell Booth, read a paper on the subject of the law. 

BRAIN STUDIES. 

The commercial and industrial community is paying more attention to the subject of brain studies than ever in the past. 

A university training in the power of the brain is essential, and it is essential that this training should be given to all who wish to enter into the world of business. 

The university has in its possession the most up-to-date equipment, which is being used to the fullest extent in the study of the brain. 

The equipment includes a large number of apparatus, and the results of the work of the faculty are being published in the journal of the University. 

I acknowledge the gratitude of the authors and of all those who have contributed to the work of the journal, and who have helped to make it the success that it is.
