INFANT PROTECTION. Work in America. Dr. LeMessurier's Observations.

When extensive hygiene work is carried on in any community, declares Dr. LeMessurier, that infant mortality is to a large extent preventable.

During the past year, last year, Dr. F. N. LeMessurier was given the assignment of health commissioner by the Executive Council to look into the question of the prevention of infant mortality in the Commonwealth of Australia. He has been working on this question for some years, and the results of his investigation are published in a report issued by the Department of Public Health and Medical Education.

Dr. LeMessurier's report is based on a careful study of the conditions prevailing in various parts of the Commonwealth, and his conclusions are based on a profound knowledge of the subject. He has shown that infant mortality can be reduced by the adoption of certain preventive measures, and that the reduction can be made effective by the cooperation of all classes of society.

In the report, Dr. LeMessurier states that infant mortality is a serious problem in Australia, and that the problem is not confined to any one class of society. He points out that infant mortality is a result of the combined action of many factors, and that the solution of the problem requires a systematic and comprehensive approach.

The report recommends a number of measures for the prevention of infant mortality, including the provision of adequate medical care, the enforcement of laws affecting motherhood and child welfare, and the establishment of a system of public health education. The report also emphasizes the importance of the role of the community in the prevention of infant mortality, and urges the cooperation of all classes of society in the work of infant protection.

Dr. LeMessurier's report has been widely praised, and his recommendations have been adopted by the various states and territories of the Commonwealth. The report has been widely discussed in the press, and has been the subject of much debate in the legislative assemblies. The report has been an important contribution to the field of infant protection, and has provided a basis for further work in this important field.

SIR ARCHIBALD STRONG.

Shelley, Worsworth, and Meredith. He has also written about the present in England, a year's June's absence, and the world will envy the rest of the world.

Miss Rita Coonan yesterday wrote me a message from her father. Nellie Melba has appointed an engagement at the Crystal Palace on the 4th of July, and the concert is to be given in aid of the relief funds of the Spanish-American War.

DNC.

The University of Adelaide. DEMONSTRATOR IN PATHOLOGY. APPLICATIONS are invited by Tuesday, June 16, for the above part-time position. $20 per annum. Further particulars on application to Dr. E. V. Richardson, Registrar.

SIR ARCHIBALD STRONG.

The Journalist. A VARIETY OF SUBJECTS. The doctor deals interestingly with the subject of infant mortality amongst the working-class population, the effects of diet on the health of the mother, and the preventive measures. He states that investigations have shown that infant mortality is caused by the use of unclean milk, and that the disease is more prevalent in the working-class population. He also refers to the importance of the cooperation of all classes of society in the work of infant protection.

Mozart, Tschaikowsky, and Faure.

There was a large attendance at the last concert of the season, which was given by the orchestra of the University of Adelaide, conducted by Dr. LeMessurier. The programme was an entirely successful one, and the audience was much pleased with the quality of the performances. There was a great deal of applause at the close of the concert, and the audience were greatly pleased with the quality of the performances.
