APPLYING SCIENCE TO INDUSTRY.

It may be hoped that the conference of scientists and industrial leaders, which is to be held in Melbourne on Monday, will succeed in attaining the object which it was called for, viz., to establish a real bond for the mutual benefit of both science and industry. With more liberal provision for the full development of the theoretical and other productive interests of industry, the conference may be of considerable value in the course of its proceedings. It is certain that the question will be agitated sufficiently to meet the case.

The conference will be held in the most considerable cities of the world, and will include representatives from all parts of the globe. It is expected that a large number of delegates will attend, and that the proceedings will be of considerable interest. The papers will be read in English and other languages, and will be translated into English for the benefit of the general public.

The conference will be held in the following cities:

1. London, England
2. Paris, France
3. Berlin, Germany
4. New York, USA
5. Tokyo, Japan
6. Moscow, Russia

The conference will be held at the University of Melbourne, the leading Australian institution for scientific and technical education.
