THE MAN ON THE LAND

HIGH-GRADE SIRES.

Influence Upon Dairy Herds

By W. J. Cowbath, B.Sc., M.R.C.V.S.

The ambition of all progressive breeders of dairy stock is to possess a high-grade sire, one that will produce more and better milk in the cows under his care. This is the basis of dairying, and he who fails to get such a sire will find his herd giving him little satisfaction. The ambition of all progressive breeders of dairy stock is to possess a high-grade sire, one that will produce more and better milk in the cows under his care. This is the basis of dairying, and he who fails to get such a sire will find his herd giving him little satisfaction.

Judicious Breeding

The reason for this twofold—producing a high grade and producing in large numbers—is the confidence in the arguments relied upon the strength of the sire and the value of the cow as a breeders. In order to have the desired result, it is necessary to choose a sire that will produce the desired effect. The sire must have the ability to produce high-quality progeny. It is necessary to have a sire that will produce high-grade progeny in large numbers. This is achieved by judicious breeding. Judicious breeding is the selection of the best possible sire and the selection of the best possible dam. The sire must have the ability to produce high-quality progeny. It is necessary to have a sire that will produce high-grade progeny in large numbers. This is achieved by judicious breeding.
