AN UNTIMELY DEATH.

The Late Mr. Sherlock Gillman.

Brilliant Young Engineer.

On Wednesday a telegram was received at Adelaide announcing the death, but the cause of death was not disclosed, of Mr. Sherlock Gillman, the aged 29 years. The young man, regarded as one of the most promising engineering students in South Australia, has produced. It is customary in an obituary notice of an able young public servant or some other person who had been prominent for many years for the death to be represented as an irreparable loss to the land of his birth. That sentiment, however, does not apply to the death of Mr. Gillman.

Valuable Service.

Mr. Gillman was the eldest son of the Assistant General Traffic Manager in the Adelaide and South Australia Railways (Mr. G. E. Gillman) and left with his father on June 6 last that a promising engineer, who had won many friends and admirers amongst his classmates and was to have been a valuable asset to the service of the South Australian Railways (G. B. S. Anderson) departed on a departmental trip to Europe and America. Mr. Gillman, and his father, Dr. Anderson, had finished their enquiries and to be described as "blessed with the State," but how much more appropriately on that occasion, he was admitted to the Santa Fe Hospital, where he had been brought unconscious.

In his complaint is not definitely known by his relatives here. His death will come as a great shock to a wide circle of friends and to those with whom he came in contact in his short but brief professional life.

Fine School Record.

Mr. Gillman was educated at St. Peter's College, and was regarded as one of the most promising engineering students who have ever attended that institution. In 1926 he passed the junior public examination at the age of 16, and the next year got through the senior public examination, with credit in chemistry and mathematics. He was awarded a Government Scholarship in 1926 for a quarter of a year to the University of Melbourne and also the Marylebone scholarship from the college. He won numerous scholarships and was popular as a student and was popular for his work in the subject of science. Promising Career Cut Short.

It is inevitable, remarked Professor Chapman, in an interview with the news that the death of Mr. Gillman had been announced. "He was a very promising young man and we are all very much grieved to hear of his untimely death. He was a brilliant engineer, and his death is a great loss to the engineering profession."

NOTES FROM LONDON.

Dogs and Coinsage.

(By T. B. Gope)

LONDON.

There is another London cruise before the season is out, and we are told that the next one is to be a visit to the United States. The occasion is the opening of the new coinage of the United States, which will be held in the city of Philadelphia this autumn. The new coins, designed by the famous American sculptor, are expected to be a great success, and will undoubtedly set the standard for the rest of the world. The event is expected to attract a large number of visitors, and will be a great occasion for the study and appreciation of American coinage.

There is something to be said for the idea of a cruise to the United States on this occasion. It is a country with a long and rich history, and there is much to be learned about its coinage and numismatics. The event is expected to attract a large number of visitors, and will be a great occasion for the study and appreciation of American coinage.

Rhodes Scholarships.

Dr. Rendall to Visit Adelaide.

Dr. M. J. Rendall, formerly headmaster of Winchester College, England, who is in special charge of the Rhodes Scholarships at the Universities of Oxford and Cambridge, will visit Adelaide about a week. He has been appointed by the University of Cambridge to act as the Rhodes Scholarships representative at the Australian University. The visit is expected to be a great occasion for the study and appreciation of American coinage.

The treatment of Oranges.

A Report by Mr. Quinn.

A report by Mr. Quinn, professor of agricultural chemistry at the University of Cambridge, England, has been widely discussed. The report is based on a large amount of research and experimentation, and it is expected to have a great influence on the treatment of oranges. The report is expected to be a great occasion for the study and appreciation of American coinage.

GIFT TO UNIVERSITY.

At a private luncheon early in December in the New College Library of the University of Cambridge, England, a dinner was given by the Chancellor, Lord Mayor of the City of Cambridge, to Mr. Quinn. The dinner was attended by a large number of the University's scholars and students, and it was expected to be a great occasion for the study and appreciation of American coinage.
