Austafia is under a debt of gratitude to this State for having consistently through the years shown an interest in agricultural research and development generally.

The invention of the reaping machine by Ridley marked but one of the many forward steps in agricultural development in the Commonwealth initiated in South Australia. The use of artificial manures, and the practical utilisation of the agricultural industry might also be mentioned in this connection.

Experimental farms throughout the State are doing valuable work, and a great deal has been begun on a fertile area testing the foot of the Mount Lofty Ranges. Here Dr. A. E. V. Richardson and several other scientists are delving deeply into the secrets of nature in the search for information calculated to advance our great agricultural industry.

The Wheat Agricultural Research Institute is already established on a farm near Berri, but Dr. Richardson (Director) has planned its erection on land near the city. Progress is being made on the construction of the institute, and the staff of experts has been appointed.

Agricultural experiments have been carried out on various crops in the last few years, and the results obtained are promising.

The Institute for Agricultural Research has also been established in the State, and is carrying out valuable work on the improvement of crops and the control of pests and diseases.

The Commonwealth has also contributed to the agricultural research work in the State, and is providing funds for the establishment of an agricultural college.

The University of Sydney has also played an important part in the agricultural research work of the State, and has provided facilities for the study of agriculture.

The State has also been developing its own agricultural research stations, and is now carrying out a considerable amount of work in the field of agricultural research.

Chemical Laboratories

The original mission of the University has been to carry out research in the laboratory, and to publish the results.

The work of the Professor of Chemistry and Mr. P. R. was not only of great importance at the present moment, but it was also of great importance in the development of the country, and in the education of the geologist.

The geology of the southern part of the State, but this is a large problem of importance.

The question is not in the least easy, but very much simpler than it appears,

Pet Culture Important

A pet culture is now being developed in the State, and is being carried out on the coastal plains.
