

An Admission Control Problem for 802.11 Wireless Networks

by

Jack V. Sudarev

MASTER DEGREE IN RADIO ENGINEERING, 1993

Thesis submitted for the degree of

Doctor of Philosophy

in

School of Electrical & Electronic Engineering

University of Adelaide, Australia

2007

Contents

Contents	iii
Statement of Originality	vii
Acknowledgements	ix
List of Figures	xi
List of Tables	xv
Chapter 1. Introduction	1
1.1 Wireless Networks Admission	1
1.1.1 Independent Basic Service Set	3
1.1.2 Infrastructure Basic Service Set	4
1.1.3 Extended Service Set	5
1.2 Literature Review	6
1.3 Problem Formulation	16
1.4 Summary of Main Results and Original Contributions	18
Chapter 2. Extended Service Set Model	21
2.1 The model	21

Contents

2.2	System Characteristics	27
2.3	Numerical Results	30
Chapter 3. Infrastructure Basic Service Set Model		35
3.1	Introduction	35
3.2	Saturated Conditions	36
3.2.1	The IEEE 802.11 Distributed Coordination Function Access Method Overview	37
3.2.2	The Model	42
3.2.3	Performance Analysis	54
3.2.4	Simulation Results	63
3.3	Finite Load Conditions on an Error Prone Channel	66
3.3.1	The Model	66
3.3.2	Performance Analysis	79
3.3.3	Model Validation	86
Chapter 4. 802.11 Extended Service Set Admission Control Problem Formulation		99
4.1	General Description	103
4.2	The State Space	104
4.3	The Control Space	106
4.4	The Cost Function	109
4.5	An Example	113
Chapter 5. Conclusion and Future Work		117
Bibliography		119

Appendix A. Derivation of the Markov Chain Steady State Probability $\pi_{0,0,0}$ in Saturated Conditions, $l \leq m$	127
Appendix B. Derivation of the Markov Chain Steady State Probability $\pi_{0,0,0}$ in Saturated Conditions, $l > m$	133
Appendix C. Derivation of the Average Payload Length of the Longest Frame Involved in a k Frames Collision	141
