ENGINEERING SCIENCE

South Australia is keeping abreast of the latest developments in University training for engineers. It is planning a new £40,000 building to be erected near the rear of the Adelaide University.

Built for the University by the Government, the structure will have a capacity for the student body. Modern methods of teaching and modern equipment will be provided. Professor K. V. H. W. Campbell (Professor of Engineering) has been appointed as the head of the department.

Tests conducted at the University show that the new building will be able to accommodate the entire student body. It will provide modern laboratories and workshops, as well as lecture rooms and offices for the professors. The building is expected to be completed within the next six months.

South Australia is determined to keep pace with the other states in providing adequate training for engineers. The government has already allocated funds for the construction of similar buildings in other parts of the state.

The new building will be equipped with the latest engineering tools and equipment, ensuring that students are well-prepared for the demands of the modern engineering world. Professor Campbell is confident that the new facility will be a significant step forward in the development of engineering education in South Australia.

The official opening of the new building is scheduled for the beginning of the next academic year. It is anticipated that the new facility will attract students from all over the state, as well as from other parts of the country and overseas.

The new building is a testament to the government's commitment to providing quality education and training in engineering. It is hoped that the new building will contribute to the state's economic growth and development, as skilled engineers play a crucial role in the modern economy.

South Australia's commitment to engineering education is part of a broader strategy to develop the state's economy and create jobs. The government has invested heavily in education and training, recognizing the importance of these areas for the state's future prosperity.

The new building is a shining example of the state's commitment to the future of engineering education. It is a symbol of the state's dedication to providing its citizens with the skills and knowledge they need to thrive in the modern world.
