Australian Aborigine Discussed.

The Australian Aborigine was the subject of a lecture delivered at the Western Australian Museum on Wednesday evening. Dr. P. J. H. Jones, of the University of Sydney, delivered the lecture, which was attended by a large number of people.

The Aborigine is an ancient race, and has existed in Australia for at least 30,000 years. His culture is based on hunting and gathering, and he has a rich and complex society. Despite their isolation, the Aborigines have managed to survive in the face of many challenges, including the arrival of European settlers.

NOTABLE SCIENTIST

John Mitchel.

John Mitchel was a prominent scientist who made significant contributions to the fields of geology and paleontology. He is best known for his work on the geological formation of the world's oldest known landmass, which he named Gondwana. Mitchel's work laid the foundation for modern geology and helped to establish the science as a serious academic discipline.

PROFESSOR HOWCHIN

A fellow since 1843, a society that stands in a unique place in the history of science. From 1843 to 1844, he was the first Professor of Physics at the University of New South Wales, and for some time he lectured on geology and paleontology at the University of Sydney. From 1845 to 1846, he was appointed to the staff of the Geological Survey of New South Wales, and in 1846 he was elected to the Council of the University of Sydney.

The University of Sydney was founded in 1850, and Mitchel was one of its first professors. He played a key role in the development of the university, and his contributions helped to establish it as a leading institution of higher education.

FIFTY YEARS AGO

From The Register, Tuesday, January 11, 1876.

The first scholarship or medal that Australia ever won was given to a student of the University of Sydney, who was the son of a wealthy merchant.

The Apparatus Needed.

Mr. Samuel presented the apparatus needed for the investigation of the atmosphere, which is essential for the study of the properties of gases.

The Apparatus Required.

Mr. Samuel pointed out that the apparatus needed for the investigation of the atmosphere is essential for the study of the properties of gases.
