

Department of Chemistry

Polarised Alkynyl Ruthenium Complexes

A Thesis Submitted Towards the Degree of Doctor of Philosophy.

By Christian Richard Parker B.Sc. (Hons)

March 2010

In memory of my three greatest scientific influences while I was growing up:

Grandpa George Parker,

A. Bruce Gray (my chemistry teacher),

Des Baldock (my physics teacher).

Contents

Abstract	i

CHAPTER 1: Introduction

1.1	Potential Applications for Metal Alkynyl Complexes	1
1.2	Synthesis	5
1.2.1	Synthesis of Alkynyl-Metal Complexes	5
1.2.2	Syntheses of Poly-ynyl-Metal Complexes	9
1.2.3	Syntheses of Homo- and Heterodimetallic Derivatives with an Even Number of Carbons in the Poly-ynyl Chain	14
1.2.4	Syntheses of Homo- and Heterodimetallic Derivatives with an Odd Number of Carbons in the Chain	22
1.2.5	Compounds with Different Bridging Unit (X)	26
1.3	Reactivity of Carbon Chains	30
1.3.1	Electrophiles and Nucleophiles	30
1.3.2	Cycloaddition Reactions	33
1.3.3	Metallic Reagents	37
1.3.4	Formation of X via Further Reactions	39
1.3.5	Chemical Redox Reactions	40
1.4	Work Described in this Thesis	43
1.5	References	45

CHAPTER 2: Reactions of Ethynyl-Metal Complexes with Tetracyanoethene: Syntheses and Chemistry of Tricyanobutenynyl-Metal Derivatives

2.1	Introduction	52
2.2	Results and Discussion	57
2.2.1	Reactions of tcne with Ethynyl-Ruthenium and -Osmium Complexes	57
2.2.2	Reactions of $\text{Ru}\{\text{C}\equiv\text{CC}(\text{CN})=\text{CN}\}_2(\text{dppe})\text{Cp}^*$	62
2.2.3	Crystallographic Data	81
2.3	Conclusion	88
2.4	General Experimental Conditions	89

2.5	Experimental	91
2.6	References	108

CHAPTER 3: Some Ruthenium Complexes of Fluorinated Alkynylcyclopentenes

3.1	Introduction	111
3.2	Results	112
3.2.1	Nucleophilic Substitution of 1,2-dichlorohexafluorocyclopentene	112
3.2.2	Reactivity of $\text{Ru}(\text{C}\equiv\text{CC}_5\text{F}_6\text{Cl-2})(\text{dppe})\text{Cp}^*$	114
3.2.3	Molecular Structures	115
3.3	Discussion	120
3.4	Conclusions	120
3.5	Experimental	121
3.6	References	125

CHAPTER 4: Synthesis and Some Reactions of the Heterometallic C_7 Complex,

4.1	Introduction	126
4.2	Results and Discussion	127
4.2.1	Synthesis of $\text{Ru}(\text{C}\equiv\text{Cl})(\text{dppe})\text{Cp}^*$	127
4.2.2	Synthesis of $\{\text{Cp}^*(\text{dppe})\text{Ru}\}\text{C}\equiv\text{CC}\equiv\text{CC}\equiv\text{CC}\{\text{Co}_3(\mu\text{-dppm})(\text{CO})_7\}$	128
4.2.3	Reactions of $\{\text{Cp}^*(\text{dppe})\text{Ru}\}\text{C}\equiv\text{CC}\equiv\text{CC}\equiv\text{CC}\{\text{Co}_3(\mu\text{-dppm})(\text{CO})_7\}$	130
4.3	General Comments	139
4.3.1	^{13}C NMR Spectra of Carbon Chain Nuclei	139
4.2.2	Molecular Structures	141
4.4	Conclusions	151
4.5	Experimental	151
4.6	References	159

CHAPTER 5: Some Ruthenium Derivatives of Bis(ethynyl) Ketone

5.1	Introduction	164
5.2	Results and Discussion	166
5.2.1	Synthesis of $\{\text{Cp}^*(\text{dppe})\text{RuC}\equiv\text{C}\}_2\text{CO}$	166
5.2.2	Alternative Synthetic Approaches to $[\text{Cp}'(\text{PP})\text{Ru}]\text{C}\equiv\text{C}\}_2\text{CO}$ [$\text{Cp}' = \text{Cp}^*, \text{Cp}; \text{PP} = \text{dppe}, (\text{PPh}_3)_2$]	170
5.2.3	Chemistry of $\{\text{Cp}^*(\text{dppe})\text{RuC}\equiv\text{C}\}_2\text{CO}$	174

5.2.4	Crystallographic Data	182
5.3	Conclusion	183
5.4	Experimental	188
4.5	References	194

**CHAPTER 6: Trends in Electrochemistry and Spectroscopy of some Ruthenium
Alkynyl Complexes**

6.1	Introduction	197
6.2	Electrochemistry	197
6.2.1	Homometallic Compounds with Symmetrical Bridges	204
6.2.2	Homometallic Compounds with Asymmetric Bridges	209
6.2.3	Heterometallic Compounds	212
6.2.4	Monometallic Alkynyl Complexes	216
6.3	UV-vis Spectroscopy	222
6.3.1	Donor-Acceptor Molecules	222
6.3.2	Asymmetric Compounds with Multiple Donor or Acceptor Groups	226
6.3.3	Solvatochromism	227
6.3.4	Redox chemistry	229
6.3.5	Protonation	230
6.4	Conclusion	230
6.5	References	232
	Future Direction	236
	List of Publication	239
	Complex Index	240

Abstract

Chapter 1 outlines the potential application of metal alkynyl complexes and then describes the different methods in the literature for the synthesis of alkynyl, poly-ynyl and homo- and hetero-metal complexes. Their chemistry will then be discussed. This Chapter concludes with an outline of the work to be described in the remainder of the thesis.

Chapter 2 describes a series of complexes containing a new tricyanovinylethynyl (3,4,4-tricyanobut-3-en-1-ynyl) ligand obtained by direct substitution of a CN group in tetracyanoethene by ethynyl complexes $M(C\equiv CH)(PP)Cp'$ [$M = Ru, Os, (PP)Cp' = (PPh_3)_2Cp; M = Ru, PP = dppe, Cp' = Cp, Cp^*$]. The reactions proceed in higher yield as the metal environment becomes sterically larger and more donating; the normal [2 + 2]-cycloaddition / ring-opened product $M\{C[=C(CN)_2]CH=C(CN)_2\}(PP)Cp'$ is also formed in some cases. The diyne $Ru(C\equiv CC\equiv CH)(dppe)Cp^*$ reacts with tcne to give only the ring-opened adduct $Ru\{C\equiv CC[=C(CN)_2]CH=C(CN)_2\}(dppe)Cp^*$. Protonation of $Ru\{C\equiv CC(CN)=C(CN)_2\}(dppe)Cp^*$ (**10**) afforded the vinylidene. A second transition metal fragment $\{ML_n\}$ [$\{ML_n\} = Ru(PPh_3)_2Cp, M'(dppe)Cp^* (M' = Ru, Os), RuCl(dppe)_2$] can be added to the CN group *trans* to the first. Compound **10** readily undergoes substitution of the 3-cyano group by nucleophiles. Some unexpected rearrangements and formation of *O*- and *N*-heterocyclic compounds were also found.

Chapter 3 describes reactions between 1,2-dichlorohexafluorocyclopentene and $Ru(C\equiv CH)(dppe)Cp^*$ (**1**) or $Ru(C\equiv CC\equiv CLi)(dppe)Cp^*$ which give $Ru(C\equiv C-c-C_5F_6Cl-2)(dppe)Cp^*$ (**36**) and $Ru(C\equiv CC\equiv C-c-C_5F_6Cl-2)(dppe)Cp^*$, respectively. Ready hydrolysis of **36** to $Ru\{C\equiv C[c-C_5F_4Cl(O)]\}(dppe)Cp^*$ occurs, which can be converted to $Ru\{C\equiv C(c-C_5F_4Cl[=C(CN)_2])\}(dppe)Cp^*$ by treatment with $CH_2(CN)_2$ / basic alumina. The cyano-fluorocarbon ligand in the latter is one of the most powerfully electron-withdrawing groups known.

Chapter 4 describes the three methods of synthesising heterometallic carbon-chain complex $\{\text{Cp}^*(\text{dppe})\text{Ru}\}\text{C}\equiv\text{CC}\equiv\text{CC}\equiv\text{CC}\{\text{Co}_3(\mu\text{-dppm})(\text{CO})_7\}$ (**40**), in two examples showing the first examples of $\text{Ru}\{(\text{C}\equiv\text{C})_x\text{I}\}(\text{dppe})\text{Cp}^*$ ($x = 1, 2$) being used in a cross coupling reaction with $\text{Ph}_3\text{PAu}(\text{C}\equiv\text{C})_{(3-x)}\text{C}\{\text{Co}_3(\mu\text{-dppm})(\text{CO})_7\}$. The reactivity of **40** with PPh_3 , MeOTf , tcne , tcnq , $\text{Fe}_2(\text{CO})_9$, NiCp_2 and $\text{Co}_2(\text{CO})_8$ took place on either the C_7 bridge or on either metal centre.

Chapter 5 discusses the reaction of **1** with oxalyl chloride which gave $\{\text{Cp}^*(\text{dppe})\text{RuC}\equiv\text{C}\}_2\text{CO}$ (**52**). This complex can be methylated to give $[\{\text{Cp}^*(\text{dppe})\text{RuC}\equiv\text{C}\}_2\text{C}(\text{OMe})]\text{OTf}$, which in turn can be protonated to the dication. Knövenagel condensation of **52** with $\text{CH}_2(\text{CN})_2$ gave $\{\text{Cp}^*(\text{dppe})\text{RuC}\equiv\text{C}\}_2\text{C}\{=\text{C}(\text{CN})_2\}$. The reaction of **1** and bis(2,4-dinitrophenyl) oxalate afforded $\{\text{Cp}^*(\text{dppe})\text{Ru}\}\{c\text{-C}=\text{C}[\text{C}_6\text{H}_3(\text{NO}_2)_2]\text{C}(\text{O})\text{C}(\text{O})\text{O}\}$. The transmetallation reaction of $\{(\text{Ph}_3\text{P})\text{AuC}\equiv\text{C}\}_2\text{CO}$ and $\text{RuCl}(\text{dppe})\text{Cp}$ unexpectedly gave the cyclic complex $[1,4\text{-}\{\text{Cp}(\text{dppe})\text{Ru}\}_2\{c\text{-COC}(\text{OMe})=\text{CHCCH}\}]\text{PF}_6$.

Chapter 6 gives an account of the electrochemistry of many of these redox-active compounds and examines the UV-Vis absorption of the more polarised compounds. Some discussion of the various observed trends is presented.

There is also a future direction of this chemistry given at the end of this work.

Statement of Originality

This thesis contains no material which has been accepted for the award of any other degree or diploma in any university and to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference is given.

I give consent to this thesis being made available for photocopy or loan.

Christian Parker

19th March 2010

Acknowledgments

I would like to express my immense gratitude to all of those who have helped me during the course of my Ph.D. I will be eternally grateful to my supervisor Professor Michael Bruce for his help, guidance and advice. I know at times it felt like why am I doing this extra work, but looking back on it now I know that it was for my own development as a chemist. I would also like to thank my co-supervisors, initially Dr Marcus Cole, who is now at the University of New South Wales and currently Dr Christopher Sumbly for their support, especially while Prof was away.

I would also like to thank my collaborators Professor Allan White and Dr Brian Skelton from the University of Western Australia for all their excellent work solving the X-ray crystal structures, particularly some of my more unusual and unidentifiable compounds. To Professor Brian Nicholson, from the University of Waikato, for running the mass spectrum of some of my compounds. Also to Dr Paul Low and Dr Mark Fox for letting me come and learn about spectro-electrochemistry and theoretical calculations for the two weeks I was at Durham University, also to Jules and Neil for the good time in the lab.

I have been very privileged to work with so many excellent post docs and having the ability to pick up on some of their expertise. Firstly, I would like to thank the matriarch of the lab Dr Natasha Zaitseva for her help with the cobalt clusters, reading my thesis and the art of growing crystals. I certainly would not have got as many structures if it was not for you. Standing at 193 cm there are not many people I can look up to, but I would like to thank the bigger men of the lab Dr Martyn Jevric and Dr Ben Hall. I have learnt a great deal from you with your very different styles of chemistry. I would also like to thank Dr Paul Humphrey, Dr David Armit, Dr Gary Perkins, Dr Cassandra Mitchell and Dr Maryka Gaudio for their help.

Mon ami Alex Burgun who did his internship in our lab from the University of Rennes. He helped me work on the tricyanovinyl and cyclopentene work and did great work

getting many crystal structures but how about those micros and carbons? Guillaume Grelaud it was nice to work with you, all the best at Canberra. To Kathy Kramarczuk thanks for the help at the start and getting the structures of the osmium compounds. I would also like to thank my other co-workers Dr Nancy Scoleri and Dr Shirley Xiao-Li Zhao. The technical staff have done an excellent job keeping the machines up and running especially, Phil Clements and Graham Bull. Peter Apoeffis, thanks for being able to fix most things when they went wrong and John Cameron for all the chemicals.

Finally, a big thank you has to go to my family to allow me to stay at the nest long enough to finish; do not worry that I am leaving to go over the other side of the world now. Thanks to my sister, mother and good friend Ben Rutherford for checking my English on this rather foreign topic to them. To the Adelaide University Boat Club it has been an enjoyment to start rowing but probably not the best idea to be Captain and try to finish a Ph.D. but it was great to win the prestigious Oxford and Cambridge Cup for the first time in 30 years. Thanks to my friends for the welcome distraction from study and to the whisky club for a wee drab every second Friday.

To my future boss Associate Professor Mogens Nielsen at the University of Copenhagen thank you for getting the grant and allowing me to come and work for you. I am looking forward to it.
