

8th August, 1955.

My dear Luca,

At the moment I am rather stumped by the specification of a book for a highly intelligent boy of $8\frac{1}{2}$ keen on uranium, atom bombs, and energy! I am sending herewith what is scarcely a solution of the problem, namely Gamow's, "The Birth and Death of the Sun". There are pictures, but I think Matteo could draw them better!

Sincerely yours,

Enc.
