Dear Father,

I am drafting the letter to the Ministry of Health again, on Will's advice. I want to put in a sentence or two of his suggestion. I propose as follows:

"In our opinion, the enquiry should include not only the degree in which mental deficiency is transmitted from generation to generation, and the correlation of this transmission with environmental and hereditary factors, but also the conclusion between mental deficiency
in family, mental deficiency, and varicose physical defects. Without such a full inquiry the value of any proposed reform could not be estimated.

Let me know any criticism as soon as you get to the

consider forms in hand.

Davon
