Dear Professor,

I thank you very much for the figures you sent me and am very glad to see my results were right. I saw Teissier yesterday and asked him for his participation to your section for the genetical Congress. He answered he is going to write for himself and for L’Heritier. Do you remember the letter Professor Darwin’s sent you about a meeting in Geneva about the applications of Calculus of Probability? The point was if the participants were to be paid. (It is always the same thing when French people deal with some organization.) I have to say that all the expenses are paid by the Institute of Intellectual cooperation which is a branch of the League.
of Nations. Professor Dawn's would like you to give him a few names of British statisticians. He hopes very much you'll be able to come. It is in the beginning of June. He has got already by me the names of F. Yates and W. L. Stevens. His intention is to ask Cecil E. Craig to come from America. Could you give us the name of a German statistician and an Italian statistician? (I mean true German and true Italian.) The Institute of Intellectual cooperation would like the meeting not to be an exclusive one. I think you'll receive some other letters from Geneva. I am now dealing with the deflation problem and chiefly when the variable is bounded (when it is possible to subtract two bounded variables).

Please remind me to all the staff of the CIB.

Yours sincerely,
